Map - Colorado Counties ii

National Economic Highlights, 1983 1

National Industry Outlook 3

Colorado Industry Employment Outlook - Major Division Analysis 9

Colorado Major Industry Division Employment Forecasts, FY 1984-85-86 14

Nonagricultural Wage and Salary Employment Growth Rate Comparisons, Colorado & U.S., 1979-1983 15

Unemployment Rate Comparisons, Colorado & U.S., 1979-1983 16

National Occupational Employment Outlook 17

Colorado Occupational Employment Outlook Including Occupations Estimated to be in Undersupply, FY 1985 21

Occupations Estimated to be in Undersupply, Denver/Boulder Labor Market Area, FY 1985 27

Statistical Information - Colorado 31

Estimated Population and Labor Market Data Summary, FY 1983 through 1986 33

Individuals Requiring Employability Service 34

Estimated Employment Status by Race, Ethnicity and Sex, FY 1984 35

Population by Age, Sex, Race/Ethnicity, April 1980 FY 1985-86 36

Labor Force Estimates by County, Annual Average, 1983 37

Unemployment Rate Ranking by County, 1983 38

Population Estimates by County, FY 1984-85-86 40

Estimated Youth Population and Labor Force by County, Annual Average, FY 1984 42

TABLE OF CONTENTS (Continued)

Estimated Youth Labor Force by Race and Spanish Origin, Colorado, SMSA and JTPA Service Delivery Area, FY 1984 45

Veteran Population by County, April 1980 52

Per Capita Personal Income, Colorado and Individual Counties, 1976-1981 54

Per Capita Personal Income by JTPA Service Delivery Area, 1976-1981 56

Estimated Employment by Major Industry, 1984 & 1989 57

Estimated Employment by Selected 2-Digit Standard Industrial Classification Industries, FY 1984-85-86 58

Average Weekly Wage by 2-Digit Standard Industrial Classification Industries, 2nd Quarter 1983 62

Estimated Total New Hires by Selected 2-Digit Standard Industrial Classification Industries, FY 1985-85 64

Consumer Price Index, All Items, All Urban Consumers, United States and Denver-Boulder Area, 1978 through 1983 68

Over-the-Year Change Analysis of Services to Individuals, CDET, FY 1982-83 69

Demographic Characteristics of Applicants Registered with the Employment Service, FY 1983, Colorado

- All Occupations 70
- Professional, Technical, Managerial 70
- Clerical and Sales 71
- Services and Agricultural, Forestry 72
- Processing and Machine 73
- Benchwork and Structural 74
- Miscellaneous and N.E.C. 75

Operating Report Data, ES Programs, FY 1983 and 1982 Comparisons, by Job Service Center 76

Characteristics of the Insured Unemployed, Colorado, 1983

- All Claimants by Industry, Occupation, Sex, Race/Ethnicity 81
- Interstate Claimants, by Industry, by Occupation 83
- All Claimants by (Industry, Duration), (Industry Age,), (Duration, Occupation), (Age, Occupation), (Duration, Sex) 83

TABLE OF CONTENTS (Continued)

PREFACE

This publication was prepared by the Research and Development Section of the Colorado Division of Employment and Training, in cooperation with the Employment and Training Administration, U. S. Department of Labor. It is one of several reports published periodically and provides historical, current, and projected labor market information, including the outlook for the Colorado economy, as well as population and labor force estimates, industry and occupational employment outlook, and an analysis of job openings received and services to registered applicants in Colorado Job Service Centers.

It is hoped that this information will be of value to officials and persons with responsibilities for the development and implementation of employment and job-training programs.

Comments, suggestions, and questions regarding content and format are invited and may be addressed to:

HIGHLIGHTS OF THE NATIONAL ECONOMY

Economic Indicators	IV Qtr. 1982	IV Qtr. 1983	Current
*Gross National Production (bil. dol.)	1,480.7	1,571.9	
*Retail Sales (mil. dol.)	45,439	49,140	50,151
Unemployment Rate (%)	10.6	8.4	7.8
Help Wanted Advertising Index (%)	79	115	129
Consumer Price Index	293.4	303.1	306.6
Capacity Utility (Mfg.)(%)	67.1	79.8	80
Personal Savings Rate (%)	5.8	4.9	5.3
Prime Rate (%)	11.9	11.0	12.0
Federal Funds Rate (%)	9.3	9.4	10.7
Federal Budget (bil. dol.)	- 147.1 (A.A.)	- 182.8 (A.A.)	

*1972 dollars

A review of the economic indicators listed above reaffirms the positive strides the nation's economy took during 1983, as it emerged from the very severe recession encountered between the third quarter 1981 and December 1982.

The economic prospects are moderately encouraging for the balance of 1984. It can be expected that inflation will begin to heat up at a slow pace for the next several months. Interest rate increases will probably follow given that in early April both the Prime and Federal Funds rates increased to 12.0 and 10.7 percent respectively. The unemployment rate which was coming down dramatically during 1983 has levelled off and remained at 7.8 percent in both February and March. The import/export ratio continues to show a significant gap on the side of imports. In January, the U.S. trade deficit reached 9.5 billion dollars. The passbook or personal savings rate has been decreasing, from 5.8 percent in 1982 to 4.9 percent in 1983. Retail sales, particularly of durable goods surged during the past fifteen months, but with interest rates on the rise, the coming months might see a depressing effect on the automobile and housing market. The usurious interest rates that abounded prior to the recent recession are still fresh in the minds of many consumers.

The major ingredient to the lack of confidence in a long term business cycle expansion is the mounting budget deficit currently estimated at about 180 billion dollars. The November 1984 election is the primary obstacle to enactment and implementation of measures to not only decrease the current deficit, but to pass future budgets that will not add to the current debt.

It can be expected that the economy in 1985 will continue to expand but at a much more moderate level. Interest rates will rise slowly as will inflation. Unemployment will remain at a fairly steady rate between 7.0 and 7.5% of the civilian labor force. Consumer confidence will erode somewhat as interest rates increase so that retail sales, particularly in durable goods, will moderate.

Measures to decrease the budget deficit should be implemented by the third quarter of 1985. It is hoped that these measures will include the following:

- Huge decreases in the defense budget.
- Deep tax reforms that include a form of flat rate taxation policy. This should cut deeply into the existing tax loophole and shelter structures that cause our current taxing system to be regressive rather than progressive.
- Tax increases that remove the major burden of taxation on the middle income and lower middle income groups, and tax all income groups fairly.
- Meaningful changes in the agricultural support programs such as the Payment In Kind (PIK) and milk subsidies.
- Adoption of some long term planning policies for the nation's needs and aspirations. Budgetary controls would more easily be attained if long range planning were implemented.

The passage and adoption of all or some of these measures will cause hardships for the economy, and therefore, contraction of the business cycle will evolve in 1986 and 1987, but the depth of the economic slow down should not be equal to that of the 1981-82 recession. The economy will not experience the bullish upturn in 1988 and 1989 that took place in 1983, but it is hoped that if some of the measures cited above are in place, a healthy, moderate growth cycle will emerge as we enter the 1990's.

NATIONAL INDUSTRY OUTLOOK

Industrial America rolled into 1984 in high gear with the goods producing industries increasing employment by 7.4 percent and the service producing industries by .9 percent between February 1983 and February 1984.

The leading growth industries were construction and manufacturing, adding 422,000 and 1,250,000 jobs respectively, to the economy. Motor vehicles and equipment manufacturing led with an approximate 21.0 percent employment gain, and wood products, furniture and fixtures, transportation equipment and electrical and electronic equipment increased employment by 10-14 percent between February 1983 and February 1984.

Despite the belief that the smokestack industries in the United States have reached their nadir, the primary metals industry gained 69,000 jobs between February 1983 and February 1984, and blast furnaces and basic steel products increased employment by 5 percent (16,000 jobs).

In the nondurable industries textile mill products and rubber and miscellaneous plastic products led the employment gains by 18.7 and 13.9 percent, respectively.

The trend since the late 1970's and early 1980's has indicated a restructuring of industry employment. In 1980 the annual average share of manufacturing to total nonfarm wage and salary employment was 22.4 percent. By February 1984 the ratio had decreased to 21.1 percent. On the other hand, services share in 1980 was 19.8, increasing to 21.9 percent by February 1984. Despite the rapid growth in the services sector, it is projected that job gains in manufacturing will account for one of six new jobs between 1982 and 1995. The manufacturing share of jobs to total nonfarm wage and salary employment will level off and remain steady during the 1990's. On the other hand, the rapid growth of employment in health, business, and legal services will have peaked by 1985 and will account for about one of three new jobs during the rest of the 1980's and into the 1990's.

Nonfarm wage and salary employment will average annual growth rates of between 1.8 and 2.0 percent during the late 1980's and 1990's.

The following table presents the ten industries expected to have the highest relative growth and the most rapid employment declines during the period 1982-90:

INDUSTRY	AVERAGE ANNUAL RATE OF CHANGE
Fastest growing:	
Medical and dental instruments	3.2
Business services	4.1
Iron and ferroalloy ores mining	5.7
Computers and peripheral equipment	4.0
Radio and television broadcasting	4.2
Other medical services	3.6
Plastic products	4.1
Scientific and controlling instruments	3.2
Electronic components	3.6
New construction	3.3

INDUSTRY	AVERAGE ANNUAL RATE OF CHANGE
Most rapidly declining:	
Leather tanning and industrial leather	-2.3
Dairy products (processed)	-2.1
Wooden containers	-2.3
Leather products, including footwear	-2.4
Tobacco manufacturers	-1.2
Bakery products	-1.0
Railroad transportation	-1.8
Cotton	-1.5
Private households	-1.9
Dairy and poultry products (farm)	-1.4

NOTE: Data include wage and salary workers, the self-employed, and unpaid family workers.

Some of these industries reflecting high annual average growth rates are merely reflecting a catch up following the severe 1980-82 recessionary period.

Iron and ferroalloy ores mining is an excellent example as is new construction.

Other projected fast growing industries during this period are chemical and fertilizer mineral mining, fabricated metal stampings, engines and turbines, materials handling equipment, household appliances and miscellaneous transportation equipment.

No industry employment analysis would be complete without addressing the employment growth in industries defined as high technology.

Much furor has been made this decade regarding the rapid growth in employment in the high technology sectors. Despite this rapid growth high technology employment in 1982 represented about 15% of total employment and the projected growth during the 1982-1990 period is expected to increase to 17% of total employment.

The broadest definition developed by the Bureau of Labor Statistics to define high technology industries has the following three criteria:

1. Includes industries with a proportion of technology-oriented workers (engineers, life scientists, science and computer specialists, etc.) at least 1.5 times the average for all industries.
2. Includes industries with a ratio of Research and Development expenditures to net sales at least twice the average for all industries.
3. Includes manufacturing industries with a proportion of technology oriented workers equal to or greater than the average for all manufacturing industries and a ratio of Research and Development expenditure to sales close to or above the average for all industries.

The following table lists the 1982 employment in the high technology industries:

EMPLOYMENT IN HIGH TECHNOLOGY INDUSTRIES, 1982
(In Thousands)

SIC	Industry	High-tech group[1]			
		I	II	III	1982
131	Crude petroleum and natural gas	X			281.7
162	Heavy construction, except highway and street	X			633.9
281	Industrial inorganic chemicals	X		X	153.5
282	Plastic materials and synthetics	X		X	182.7
283	Drugs	X	X	X	199.8
284	Soaps, cleaners, and toilet preparations	X		X	145.3
285	Paints and allied products	X		X	59.7
286	Industrial organic chemicals	X		X	174.3
287	Agricultural chemicals	X		X	67.1
289	Miscellaneous chemical products	X		X	91.5
291	Petroleum refining	X		X	169.0
301	Tires and inner tubes	X			101.9
324	Cement, hydraulic	X			28.5
348	Ordnance and accessories	X		X	71.4
351	Engines and turbines	X		X	114.8
352	Farm and garden machinery	X			130.8
353	Construction, mining, and material handling machinery	X			340.9
354	Metalworking machinery	X			320.3
355	Special industry machinery, except metalworking	X		X	179.4
356	General industrial machinery	X			283.2
357	Office, computing, and accounting machines	X	X	X	489.7
358	Refrigeration and service industry machinery	X			161.3
361	Electric transmission and distribution equipment	X		X	110.1
362	Electrical industrial apparatus	X		X	211.8
363	Household appliances	X			142.0
364	Electric lighting and wiring equipment	X			186.9
365	Radio and TV receiving equipment	X		X	94.6
366	Communication equipment	X	X	X	555.7
367	Electronic components and accessories	X	X	X	568.7
369	Miscellaneous electrical machinery	X		X	141.3
371	Motor vehicles and equipment	X			690.0
372	Aircraft and parts	X	X	X	611.8
376	Guided missiles and space vehicles	X	X	X	127.3
381	Engineering, laboratory, scientific, and research instruments	X		X	75.7
382	Measuring and controlling instruments	X		X	244.3
383	Optical instruments and lenses	X		X	32.5
384	Surgical, medical, and dental instruments	X		X	160.4
386	Photographic equipment and supplies	X		X	138.3
483	Radio and TV broadcasting	X			216.4
489	Communication services, n.e.c.[2]	X			91.0

EMPLOYMENT IN HIGH TECHNOLOGY INDUSTRIES, 1982
(In Thousands)
(Continued)

SIC	Industry	High-tech group[1]			
		I	II	III	1982
491	Electric services	X			415.1
493	Combination electric, gas and other utility services	X			198.4
506	Wholesale trade, electrical goods	X			434.9
508	Wholesale trade, machinery, equipment, and supplies	X			1344.9
737	Computer and data processing services	X		X	357.5
7391	Research and development laboratories	X		X	162.7
891	Engineering, architectural, and surveying services	X			568.7
892	Noncommercial educational, scientific and research organizations	X			117.8

[1] Group I. Includes industries with a proportion of technology-oriented workers (engineers, life and physical scientists, mathematical specialists, engineering and science technicians and computer specialists) at least 1.5 times the average for all industries.

Group II. Includes industries with a ratio of R & D expenditures to net sales at least twice the average for all industries.

Group III. Includes manufacturing industries with a proportion of technology-oriented workers equal to or greater than the average for all manufacturing industries, and a ratio of R & D expenditures to sales close to or above the average for all industries. Two nonmanufacturing industries which provide technical support to high tech manufacturing industries also are included.

[2] Not elsewhere classified.

Projected annual average rates of growth in the major industry sectors are listed below for the period 1982-1990:

Total Private	1.9
Mining	.6
Construction	3.1
Manufacturing	1.5
Durable goods	1.9
Nondurable goods	.9
Transportation, communication, public utilities	1.3
Trade	1.7
Finance, insurance and real estate	2.2
Services	2.5
Government	.8

Financial and banking services is projected to grow by 4 percent per year due in part to the introduction of new consumer services; however, employment growth will be half that rate because of the increased use of automatic teller machines and computerized banking and stock transactions.

Transportation, communication and public utilities will mirror the finance industry. Output will lead many other sectors as the demand for new telecommunication services increases, but overall job growth will be moderate.

Growth in the trade and government sectors will be slower than it has been historically.

The largest number of job openings in retail trade will be in eating and drinking establishments, department stores, grocery stores and new car dealers, while those sectors expected to lose jobs are mobile home dealers, variety stores, general merchandise stores, dairy products, children's wear and fur shops.

In wholesale trade the largest gains will be in establishments selling machinery and equipment, motor vehicles, miscellaneous nondurable goods and electrical goods.

Government employment will continue its downward trend, especially in the state and local sectors. Tight budgets and declining school enrollments are the primary causes of the expected slow growth. It is anticipated that enrollment in elementary and secondary schools will pick up during the 1990's as children of the baby boom generation advance through school, thereby leading to a slight upturn in government employment.

COLORADO
INDUSTRIES EMPLOYMENT OUTLOOK
MAJOR DIVISION ANALYSIS

THE 1982-83 RECESSION

With the onset of the recessionary phase of its business cycle during the second quarter of 1982, employment growth rates in the Colorado economy continued to deteriorate during fiscal year 1983. From a cyclical peak of a plus 5.0 percent during the third quarter of 1981, nonfarm wage and salary employment growth dropped to a negative rate of -1.4 percent during the first quarter of 1983. For the fiscal year as a whole, wage and salary employment registered a negative growth rate of a -0.6 percent.

Comparing the Colorado downturn with the national experience, it is estimated that both economies hit their cyclical peaks during the third quarter of 1981. The Colorado economy entered the recessionary phase of its cycle during the second quarter of 1982 while the national economy entered this phase during the fourth quarter of 1981. This six month lag compares to concomitant entries during the 1974-75 recession and is primarily attributable to the strong energy impetus driving the local economy during this period. This impetus came to a dramatic halt during the second quarter of 1982. This lag, although to a lesser extent, also affected the timing of the cyclical troughs in each economy. Nationally, the cyclical trough was reached during the fourth quarter of 1982, while the Colorado economy hit the bottom of its cycle during the first quarter of 1983.

In terms of severity, the national economy experienced a 12 month contraction stage (fourth quarter to fourth quarter) while locally the contraction is estimated to have lasted approximately nine months (second quarter to first quarter). Again, in terms of employment, at the national level there were 17 months of negative growth, compared to only eight months of such rates for Colorado. Additionally, monthly negative growth averaged a -1.5 percent for the U.S. economy compared to a -1.2 percent average for the local economy. Given these three severity measurements it would seem reasonable to conclude that, when using changes in nonfarm w/s employment as the comparative measuring tool, the contraction stage of the 1982-83 recession was significantly more severe nationally.

Both the Colorado and national economies began to register positive employment growth rates in the third quarter of 1983 (the first quarter of FY 1984). This would seem to indicate that past concomitant relationships are again being established and that both economies are currently being driven by short-term fiscal and monetary policies that have originated at the national level during the past year.

NOTE: The complete business cycle on which the above analysis is predicated is composed of three phases: 1) a deceleration phase (peak to recession entry); 2) a recessionary phase made up of two stages (an entry-to-trough contraction state and a trough-to recessionary exit recovery stage); and 3) an acceleration phase (recession exit to new peak).

THE FY 1984-86 OUTLOOK

(Summary Analysis)

In defining the employment forecasts for the fiscal year 1984 through 1986, certain assumptions had to be made regarding national fiscal and monetary policies that are expected to be in place during this 36 month period. As the Colorado economy entered FY 1984 both policies were excessively expansive. For example, during the first six months of 1983 the M2 money supply was growing at an annual rate of nine percent. This compares to an annual rate of growth during the comparable period in 1982 of two percent (both rates are based on 1972 dollars). Given the tax laws and spending propensities that were in place at the beginning of FY 1984, federal deficits are estimated to increase by about 190 billion dollars during this 12 month period.

For the most part, the fiscal and monetary policies in effect during the early months of fiscal year 1984 will probably not be altered significantly until after the 1984 elections. A continuation of this environment should certainly improve the ability of the Colorado economy to generate new job opportunities in both FY 1984 and FY 1985. Compared to a negative growth in FY 1983, the next two fiscal years should experience annual increases in nonfarm wage and salary employment of about 3.0 to 3.5 percent.

Sometime during the latter half of fiscal year 1985, policy changes in the fiscal arena are expected to be made that will address the federal deficit problem. These changes will probably involve major efforts to reduce the five year, one trillion dollar addition to the federal deficit that is anticipated should current fiscal policies remain in effect.

Primarily because of their size, recent and current deficits have (through foreign purchases of a portion of the debt and partial monetization) contributed rather significantly to the economic recovery that began both nationally and locally in 1983. Any major effort, therefore, to reduce the size of the annual deficit will probably have a contractive effect on overall economic activity and concomitant effects on employment growth rates. These effects are expected to slow the employment growth rates in the Colorado economy during fiscal year 1986 to around two percent or less.

(Major Industry Division Outlook)

The Mining Industry

Buffeted by a floundering steel industry, declining oil prices and substantial uranium inventories, Colorado's mining industry gave up 11,000 jobs between January 1982 and April 1983. At the beginning of FY 1984 (July 1983), Metal Mining was still 4000 jobs short of year ago levels, Bituminous Coal was off 1300 jobs and Oil and Gas Extraction employment was 2700 jobs short. As the year ago figures continue to decrease the over-the-year shortages will become less severe. Still, negative growth rates in the mining industry are expected to continue for most of FY 1984.

Recent improvements in the metals and bituminous coal sectors coupled with a moderately strong economy should move employment growth rates to the positive side of the ledger during fiscal year 1985. However, compared to past growth rates in this industry, employment gains will be small. For FY 1985 about 900 net new jobs are expected, with another 800 new openings becoming available in FY 1986. A deteriorating middle east political environment could, of course, accelerate the anticipated job growth in the oil and gas extraction sector substantially.

The Construction Industry

The upturn that began in the Colorado economy during the second quarter of 1983 should keep construction employment growth in the plus column during fiscal

1984. The assumption of reasonably stable interest rates during the period will continue to act as a support for the labor demand being generated by the residential housing sector. Additional trade center construction that is expected to begin during the latter half of the fiscal year should provide additional job opportunities in the nonresidential building sector. In the heavy construction area accelerated road and bridge construction and repair, and expanded activities at the Consolidated Space Operations Center will provide further demand for construction occupations during the fiscal year.

As the economy moves into fiscal year 1985, increasing federal deficit and expanding private credit demands are expected to raise interest rate levels, both short and long term. As these higher rates work their way through the economy they will have a negative impact on both commercial and residential construction activity. However, anticipated losses in these areas during the year are expected to be partially offset by gains due to new oil shale construction programs and continuing space center construction activity, both direct and associate. Overall, growth will still be positive, but the number of new jobs made available will be somewhat less than FY 1984 levels.

By the beginning of fiscal year 1986 legislation will probably be in place that will begin to reduce the federal deficit. Although these efforts will have a positive effect on interest rates, the primary effect will be a contraction of overall economic activity. This new economic climate is expected to reduce further the rate of growth in construction employment during FY 1986. Should the deficit reduction effort taking place at the national level be substantial, construction employment in the Colorado economy could actually decline during the fiscal year.

The Manufacturing Industry

The 1982-83 recession had a significant negative impact on local manufacturing employment levels. Between October 1981 and March 1983 the Colorado economy lost over 14000 manufacturing jobs. During this 17 month period losses were the heaviest in the Primary Metals, Machining, and Fabricated Metal sectors. On a relative basis, recessionary losses locally were of about the same magnitude as the losses experienced nationally (-8% for Colorado vs -11% for the national economy).

Given the size of these losses and the level of manufacturing employment in the state as of June 1983, fiscal year 1984 is expected to show only moderate increases in the number of net new jobs being generated by the industry. It is estimated that we will be well into the fiscal year before manufacturing employment levels are above year ago figures. Because of this "catch up" period, therefore, total manufacturing employment should exceed 1983 levels by a modest 2800 jobs for the year.

Employment growth rates during the fiscal years 1985 and 1986 will be higher than fiscal 1984, but still relatively modest when compared to most of the rates experienced during the five years preceding the 1982-83 recession. This assumption of slower growth for this industry is predicated on five basic factors:

1. A strong dollar, third world debt repayment problems, and the slow economic recovery being experienced by some of our primary trading partners will continue to impede our manufacturing export efforts.

2. The national merchandise trade deficit for 1983 is estimated to be above 70 billion dollars. For the calendar year 1984 the deficit is expected to approach 100 billion dollars. Trade imbalances of this magnitude have obvious negative effects on the levels of manufacturing employment in both the national and Colorado economies.

3. The competition from manufacturing firms residing in other states continues to intensify in both the local and national markets being served by Colorado manufacturers.

4. The new competitive environment resulting from the deregulation of portions of the communication industry may have some negative effects on employment levels in Colorado's communication equipment manufacturing sector.

5. Surging defense expenditures could, of course, counterbalance a significant portion of the anticipated slowing of the employment growth rate resulting from these four factors. But, if as previously assumed, the federal deficit problem will be addressed sometime during the latter part of FY 1985, any meaningful effort to reduce the expenditure side of the problem will require a slowing of the growth or actual reductions in defense outlays.

The Transportation, Communications and Public Utilities Industry

Labor problems in the air transportation sector, additional competitive shakeouts, and deregulation adjustments in the communication sector will keep new job growth in this industry at a minimum during fiscal year 1984. During FY 1985, all three of these factors are expected to stabilize. This stabilization should lift rates moderately higher than FY 1984 levels. Particularly through the first half of the year, job expansion should turn positive or exceed FY 1984 growth rates in the trucking, air transportation, and communications sector.

Fiscal year 1986 is expected to show the industry growing at about the same rate anticipated for the economy as a whole, around two percent.

The Trade Industry

Excessively stimulative fiscal and monetary policies implemented at the national level during 1982 led both the national and Colorado economies out of their respective recessions and into the recovery phase of their business cycles during 1983. Accelerating growth in the M2 money supply, and federal deficit increases of some 80 billion dollars were translated into retail sales that were running 15 to 20 percent above year ago levels by December 1983.

As stated in the preceding summary statements these policies, more or less, are expected to continue at least through November 1984. The federal deficit, for example, will reach the 190 billion dollar level during calendar 1983, and probably increase another 10 billion over the 1983 level during calendar 1984. We should, therefore, have a booming trade sector during FY 1984. New job growth should exceed 4 percent or 14000 new openings.

During the following two fiscal years growth in the Trade industry is expected to moderate, but still provide average annual increases of about 9000 new jobs. A radical change in either fiscal or monetary policy, however, could significantly reduce the anticipated growth in the industry.

The Finance, Insurance and Real Estate Industry

A continuing strong response to the deregulation of its financial sector portends good employment growth for this major industrial division at least through fiscal year 1984. Accelerating diversification with its accompanying crossover of services would seem to be creating short term, redundant job opportunities. Add an improving local securities market, and a reasonably stable real estate market to the deregulation push, and we can expect about 4000 new jobs to be created in FY 1984.

Federal Reserve Board and Congressional concerns regarding the pace of diversification, increased use of advanced electronic equipment, and federal deficit problems are expected to moderate growth rates in the industry during FY 1985 and 1986. By the latter fiscal year, new job generation is forecast to be at about half the fiscal year 1984 rate.

The Service Industry

When compared to the service industry's response to previous recessions, particularly the 1974-75 economic correction, the recent Colorado downturn had a significant impact on employment growth in this major division. During the quarter preceding our recessionary entry, over-the-year employment gains were averaging more than 16000 new jobs. By the time the Colorado economy had hit the trough of its recession, however, over-the-year growth had dropped to just over 1000 new jobs. During the 1974-75 recession, employment growth in the industry dropped from about 12000 new jobs to 8000 new jobs during the comparable period. The dramatic slowdown that took place during the 1982-83 period can be traced, for the most part, to much slower or negative growth in the hotel/motel, business services, and miscellaneous services sectors.

Because of the historically low growth rate levels being experienced as we came out of the recession, service employment, on both a relative and actual basis, should lead all other major divisions in job gains during FY 1984. Growth rates that were negative during the early months of calendar 1983 for the hotel/motel, and educational services sector should turn positive during the first half of the fiscal year. Business, health and amusement and recreation services should show strong gains during the period.

With proportionately more of each new dollar of spendable earnings being allocated to service type expenditures, strong employment growth should carry over into FY 1985. Job expansion is expected to be only slightly lower than FY 1984 levels.

As with many of the other major divisions, an anticipated slowdown in economic activity during FY 1986 will slow the demand for service type activities. Job gains are expected to be about half the level experienced during fiscal years 1984 and 1985.

Public Administration

Budget cuts made during the past year are expected to affect employment levels well into fiscal year 1984. Employment losses of around 1000 are anticipated. Modest employment gains are forecast for fiscal year 1985 and 1986, with job levels in the period approximately those experienced during FY 1983.

COLORADO
MAJOR INDUSTRY DIVISION FORECASTS

NATIONAL OCCUPATIONAL EMPLOYMENT OUTLOOK

Industry growth patterns strongly affect occupational structures in our economy. Growth and demand for different occupational groups change with industrial movements. Measures like technological change, import policies, investment in foreign firms, new life styles and values all contribute to changing demands for occupational categories.

In 1959 manufacturing comprised 25 percent of total employment. By 1990 it is projected to be only 18.5 percent. Transportation, trade, finance and services were 44.5 percent of the total in 1959. Their share will increase to 64 percent by 1990.

These changes represent significant adjustments in our occupational structures and also in our earnings and income structure.

Service oriented jobs in 1982 reported average weekly earnings of: finance, insurance and real estate, $245; personal and business services, $225; wholesale and retail trade, $198. Manufacturing average weekly earnings were $331.

The service industries use large numbers of secretaries, nurse aides, janitors, sales clerks, waiters and waitresses, occupations known for their low pay and minimum educational requirements. In the past, manufacturing jobs lead to upward mobility opportunities, but the increased use of robots, and highly sophisticated machinery, is spawning a new breed of occupations that do not foster these same opportunities.

Many factories are being designed by highly paid professionals, and are being staffed by low-skilled, low paid workers. Upward mobility, on the job training, and collective bargaining opportunities are being replaced by robots and highly mechanized manufacturing systems, or by having labor intensive articles produced in foreign countries where labor availability is plentiful and cheap.

Listed below are the 20 projected fastest growing (in terms of percentage change) occupations between 1982 and 1985:

OCCUPATION	PERCENT GROWTH IN EMPLOYMENT
Computer service technicians	96.8
Legal assistants	94.3
Computer systems analysts	85.3
Computer programmers	76.9
Computer operators	75.8
Office machine repairers	7.7
Physical therapy assistants	67.8
Electrical engineers	65.3
Civil engineering technicians	63.9
Peripheral EDP equipment operators	63.5
Insurance Clerks, Medical	62.2
Electrical and electronic technicians	60.7
Occupational therapists	59.8
Surveyor helpers	58.6
Credit clerks, banking and insurance	54.1
Physical therapists	53.6
Employment interviewers	52.5
Mechanical engineers	52.1
Mechanical engineering technicians	51.6
Compression and injection mold machine operators, plastics	50.3

Of these occupations, 14 are professional and/or technical jobs, four are in the clerical and two are in the blue collar categories.

On the other hand, of the 20 occupations that will generate the most new jobs (see table below) eight are in the service occupations, two are clerical, four are professional and/or technical occupations, one is in sales, two are in managerial-supervisory categories, one involves operatives and two involve blue collar workers:

OCCUPATION	Change in Total Employment (In Thousands)	Percent of Total Job Growth	Percent Change
Building custodians	779	3.0	27.5
Cashiers	744	2.9	47.4
Secretaries	719	2.8	29.5
General clerks, office	696	2.7	29.6
Sales clerks	685	2.7	23.5
Nurses, registered	642	2.5	48.9
Waiters and waitresses	562	2.2	33.8
Teachers, kindergarten and elementary	511	2.0	37.4
Truck drivers	425	1.7	26.5
Nursing aides and orderlies	423	1.7	34.8
Sales representatives, technical	386	1.5	29.3
Accountants and auditors	344	1.3	40.2
Automotive mechanics	324	1.3	38 3
Supervisors of blue-collar workers	319	1.2	26.6
Kitchen helpers	305	1.2	35.9
Guards and doorkeepers	300	1.2	47.3
Food preparation and service workers, fast food restaurants	297	1.2	36.7
Managers, store	292	1.1	30.1
Carpenters	247	1.0	28.6
Electrical and electronic technicians	222	.9	60.7

It is important to note that the fast growing occupations in the first table are not found on the list of occupations that will add the most jobs over the 1982-1995 period. Almost half of the fastest growing occupations are in the computer or health fields; and almost half of the occupations in the list of most job generation are in the low paying service-oriented categories.

Some occupations are expected to decline over this same period. In general, these occupations are concentrated in industries that are contracting or are severely affected by technological change.

Listed below are the 20 most rapid declining occupations:

OCCUPATION	PERCENT DECLINE IN EMPLOYMENT
Railroad conductors	-32.0
Shoemaking machine operatives	-30.2
Aircraft structure assemblers	-21.0
Central telephone office operators	-20.0
Taxi drivers	-18.9

OCCUPATION	PERCENT DECLINE IN EMPLOYMENT
Postal clerks	-17.9
Private household workers	-16.9
Farm laborers	-15.9
College and university faculty	-15.0
Roustabouts	-14.4
Postmasters and mail superintendents	-13.8
Rotary drill operator helpers	-11.6
Graduate assistants	-11.2
Data entry operators	-10.6
Railroad brake operators	- 9.8
Fallers and buckers	- 8.7
Stenographers	- 7.4
Farm owners and tenants	- 7.3
Typesetters and compositors	- 7.3
Butchers and meatcutters	- 6.3

As stated above, occupational staffing patterns tend to change moderately as industry structures change. The list below shows the percent distribution of employment by major occupation for 1978, 1982 and projected 1995:

OCCUPATIONAL GROUP	1978	1982	1995
Total, all occupations	100.0	100.0	100.0
White collar workers	49.8	51.4	52.5
Professional, technician	15.9	16.3	17.1
Nonagricultural, etc.	9.0	9.4	9.6
Salesworkers	6.6	6.9	6.9
Clerical workers	18.3	18.8	18.9
Blue collar workers	32.6	30.0	29.2
Crafts & kindred	12.0	11.4	11.6
Operatives	14.6	12.8	12.1
Nonfarm laborers	6.0	5.8	5.5
Service workers	14.8	16.0	16.3
Private household workers	1.2	1.0	.7
Other service workers	13.6	15.0	15.6
Farmworkers	2.8	2.7	1.9

Some of the highlights concerning occupational demand in the 1990's are:

- Jobs that appear to be in trouble are those in heavy manufacturing which can be handled in the future by robots. Heavy manufacturing will account for about 11 percent of jobs in America down from the approximate 24 percent today. On the other hand, the use of robots will create new high skilled jobs for people to make, service, and operate them.

- Computer programmers will be in accelerated demand.

- The aging of the American population will trigger tremendous growth in jobs in health care, public housing and mass transportation all geared to the special needs of the elderly.

- The continuation of permanent career women in the labor force will stimulate jobs in the service industries. Day care centers will increase, adding to the demand for teachers, social workers, psychologists and coaches. Multi-family earners will continue to dine out in increasing numbers, thereby creating a greater demand for restaurants and the jobs that are associated with them. Increased use of prepared foods and fast foods will also create a demand for occupations associated with these sectors.

As the national economy approaches the year 2000, there may be even larger changes in occupational structure than were experienced during the last two decades.

COLORADO OCCUPATIONAL EMPLOYMENT OUTLOOK

It is estimated that Colorado industry will generate approximately 50,000 new jobs due to growth and 44,000 jobs due to replacement annually during the 1984-1989 period. (Growth is defined as job openings due to industrial expansion of existing establishments or births of new firms within or without existing industries. Replacement is defined as job openings due to deaths, retirements, temporary leave from the labor force and occupational changes.)

Approximately one-third of the 94,000 annual job opening generation will be related to professional, technical and managerial skills; one-sixth will be in the service occupation; one-fifth in the clerical and office occupations; and one-third in sales, maintenance, repair, materials handling, and construction.

Of these 94,000 annual average job openings, approximately 58,000 will be represented by occupations related to vocational/technical training programs. Those occupational groups generating 1,000 or more jobs annually during this projected period are as follows:

Food Management Production & Services	5,600
Filing, Office Machines & General Office	4,200
General Merchandising	4,000
All Other Operatives & Semi-skilled Workers	3,700
Stenographic, Secretarial & Related Occupations	2,900
Accounting and Computing	2,500
Industrial Marketing	2,400
Materials Support Occupations	1,300
Heavy Equipment Operators	1,300
Carpentry	1,300
Other Construction and Maintenance	1,300
Nursing (Associate Degree)	1,300
Foremanship, Supervisor, & Management Dev.	1,200
Institutional & Home Management	1,200

The following list ranks those specific occupations expected to post the highest employment levels in 1984 and 1989:

	Employment	
OCCUPATIONAL TITLE	1984	1989
Sales Clerk	40,000	47,100
Waiters/Waitresses	35,900	42,300
General Clerk, Office	34,100	40,400
Secretary	34,100	40,400
Cashier	22,100	26,000
Teacher, Secondary	21,500	25,100
Teacher, Elementary	21,200	24,800
Sales Rep., Non Tech.	18,000	21,100
Bookkeeper, Hand	16,900	20,400
Nurse, Professional	16,900	20,400
Janitors	16,400	19,500
Stock Clerk	14,000	16,500
Store Manager	13,500	15,900
Typist	12,900	15,400
Carpenter	13,100	15,200

Between the 1970 and 1980 censuses white collar workers and service workers increased their proportional share of total employment as blue collar workers decreased. This phenomenon occurred nationally as well, emphasizing the fact that we are becoming more of a service-using economy than a goods-using economy.

A new phenomena in the job market during the 1980's will be the large numbers of college graduates as compared to the demand for college educated workers. There will be proportionately fewer job openings calling for advanced degreed workers and at the same time, more people in the labor force will have these degrees. Such a secnario results in an underutilized work force, and creates a competitive environment between those with job skills in demand but not the education, and those with the education but not the job skills. It also creates a highly competitive environment between equally qualified persons for the scarce jobs. Of the 15 occupations employing the most persons during this projection period, only four require degrees from academic institutions.

Projecting occupational job growth and replacement demand has become fairly viable with the use of the staffing patterns available from the Occupational Employment Statistics (OES) Program. However, to effectively determine over and under supply, it is essential to view the other part of the equation - available supply. The mobility of the current labor force, the availability and practice of transferring from one occupation to another, the acceptance of jobs totally unrelated to the training and/or education of persons results in unrealistic statistics concerning occupational supply. Despite this limitation, counselors, employers, career planners and employment training agencies require some insight into the relationship between supply and demand in the labor market.

One large source of information concerning supply is the Employment Service Automated Reporting System (ESARS). In FY 1978, more than 15 million people registered with Job Service Centers nationally seeking job-related services. Approximately 95% of these applicants were unemployed. In calendar year 1978, over 17 million persons were unemployed, implying that Job Service Centers register a substantial portion of labor supply.

Just as the demand projections do not encompass all demand, the available supply data from the ESARS program does not define the total supply. However, analysts in the Research and Development Section have designed a method of measurement using the available ESARS supply and job bank demand information for determining a workable analysis of the local labor market for short-term occupational supply and demand estimates. Output from the program (Quarterly Occupational Supply/Demand Outlook) indicates that, relative to the estimated demand expected, the following occupations will be in short supply during fiscal year 1985:

OCCUPATIONS ESTIMATED TO HAVE SIGNIFICANT OR HIGH UNDERSUPPLY RELATIVE TO ESTIMATED DEMAND

When using these occupations as guides for training programs or job search efforts, it should be recognized that occupational supply/demand imbalances are caused by many factors in addition to a shortage or redundancy of trained labor resources. The level and type of remuneration, job location, the hours to be worked, available transportation to and from the work site, and excessive turnover, are examples of factors in addition to the trained labor resource factor that can influence the degree of balance being achieved by the job match function for a particular occupation.

ADAMS COUNTY SERVICE DELIVERY AREA

GENERAL ECONOMIC ASSUMPTIONS UNDERLYING SERVICE DELIVERY AREA FORECASTS

The prediction of future employment levels forces the analyst to make certain assumptions about the behavior of several key economic variables during the time period in question (i.e., FY 1984-86, or July 1983 to June 1986). We assume that the following scenario will characterize the economy in the outlook period.

1) Fiscal and monetary policy at the national level will remain loose and expansionary through most of FY 1985. At that time the rate of growth in the money supply (M2) will slow significantly. Efforts will also be made to increase federal revenue and/or slow the rate of federal spending; however, these changes in fiscal policy will probably not have a significant effect until late in FY 1986. Interest rates on short-term bank loans to businesses will average about 13.5 percent during our three year outlook period.

2) The rate of increase in the overall price level will be somewhere within the 4-8 percent range. The nature of the inflation will be primarily demand-pull rather than cost-push.

3) Wage increases overall will not outpace productivity gains.

4) Consumption spending will remain fairly strong through FY 1985.

Industry divisions are analyzed in order of the number of the jobs that they provide to the local economy, with those providing the most jobs analyzed first.

Adams County Service Delivery Area

The Trade Division

Employment in trade as a whole remained virtually unchanged between the second quarters of 1982 and 1983. General merchandise stores suffered a 20.3 percent loss in employment in this time period, while employment in auto dealers and gas stations fell by 5.4 percent. Sectors exhibiting strong growth rates were apparel and accessory stores (33.9 percent), food stores (6.8 percent), and eating and drinking places (12.5 percent).

The 12 month average in Adams County retail sales for the period ending in October of 1983 was 5 percent higher than the figure for the previous 12 months. Strong retail sales should continue through most of fiscal year 1985. Thus, we expect to exhibit moderate employment growth rates in FY 1984, followed by low but positive growth rates in fiscal years 1985 and 1986.

The Services Division

The division as a whole experienced a 5.5 percent decline in employment between the second quarters of 1982 and 1983. Among the major sectors experiencing negative growth, business services declined by 6.4 percent, health services declined by 30 percent, and social services declined by 11.8 percent. Employment in personal services rose by 20.6 percent, while employment in amusement and recreation services registered a 12.3 percent increase.

Increasing aggregate demand and relatively stable prices in fiscal 1984 should lead to positive employment growth in services. A moderate to high growth rate should continue through most of FY 1985, after which the growth rate should fall to a low but positive rate.

The Manufacturing Division

Employment in the division as a whole fell by 14.2 percent between the second quarters of 1982 and 1983. Among the major sectors experiencing declines, employment in machinery except electrical fell by 13 percent, while employment in fabricated metal registered a 1.9 percent decline and food and kindred products fell by 11.4 percent.

The manufacturing division faced major problems during the 1982-83 recession, among them high real interest rates and strong import competition. Although these problems persist in 1984, it is expected that strong aggregate demand and relatively stable wages and prices will help boost manufacturing employment growth to a low but positive rate in FY 1984. We expect the growth rate to rise slightly in FY 1985, followed by a slight drop in the rate of increase in FY 1986.

The Transportation, Communication, and Public Utilities Division

The division as a whole experienced a 2.3 percent decline in employment between the second quarters of 1982 and 1983. Among the major sectors within the division, trucking and warehousing registered a 1.4 percent increase in employment, while employment in electric, gas, and sanitary services grew by 4.3 percent.

A growing population and relatively stable energy costs should lead to low but positive growth rates in this division through FY 1986. Continuing deregulation in parts of the communication sector may have a negative effect on employment in that sector.

The Construction Division

Employment in the division as a whole fell by 5.6 percent between the second quarters of 1982 and 1983. Negative growth was experienced in general building contractors (-8.4 percent) and heavy construction contractors (-26.2 percent). Special trade contractors registered a 4.3 percent positive growth.

Fiscal year 1984 should be a good one for home building in Adams County. Home building permits in Westminster and Thornton were up by about 250 percent over 1982 permits. Continued high levels of aggregate demand and stable prices may allow for increased spending on home improvements, and thus lead to positive employment growth in special trade contractors.

We expect a low to moderate growth rate in construction employment in FY 1984, followed by a steadily declining but still positive growth rate through FY 1986.

The Finance, Insurance and Real Estate Division

The division as a whole experienced a remarkable 29.2 percent growth in employment between the second quarters of 1982 and 1983. Among the major sectors in the division, credit agencies other than banks grew by 143 percent, insurance carriers grew by 5.3 percent, and the real estate sector grew by 8.4 percent. Banking registered a 3.8 percent increase in employment.

A continued high level of economic activity may lead to even further increases in the demand for money by early FY 1985. This should in turn lead to moderate increases in employment in banking and credit agencies other than banks. A growing population would tend to lead to increased demand for insurance and real estate services.

We expect moderate to high growth rates for this division in FY 1984, followed by moderate to low growth rates in FY 1985 and FY 1986.

The Public Administration Division

The division as a whole experienced a 17.6 percent decline in employment between the second quarters of 1982 and 1983. Nearly every sector of the division experienced employment losses during this period.

We expect low negative growth rates in the division in FY 1984, followed by very low growth rates in FY's 1985 and 1986.

The Mining Division

Most of the employment in this division occurs in the oil and gas extraction sector. The division as a whole experienced a 38 percent decline in employment between the second quarters of 1982 and 1983.

Employment growth should remain negative through fiscal year 1984, followed by low growth rates in FY's 1985 and 1986.

GENERAL ECONOMIC ASSUMPTIONS UNDERLYING SERVICE DELIVERY AREA FORECASTS

The prediction of future employment levels forces the analyst to make certain assumptions about the behavior of several key economic variables during the time period in question (i.e., FY 1984-86, or July 1983 to June 1986). We assume that the following scenario will characterize the economy in the outlook period.

1) Fiscal and monetary policy at the national level will remain loose and expansionary through most of FY 1985. At that time the rate of growth in the money supply (M2) will slow significantly. Efforts will also be made to increase federal revenue and/or slow the rate of federal spending; however, these changes in fiscal policy will probably not have a significant effect until late in FY 1986. Interest rates on short-term bank loans to businesses will average about 13.5 percent during our three year outlook period.

2) The rate of increase in the overall price level will be somewhere within the 4-8 percent range. The nature of the inflation will be primarily demand-pull rather than cost-push.

3) Wage increases overall will not outpace productivity gains.

4) Consumption spending will remain fairly strong through FY 1985.

Industry divisions are analyzed in order of the number of the jobs that they provide to the local economy, with those providing the most jobs analyzed first.

Arapahoe/Douglas Service Delivery Area

The Services Division

Employment in the division as a whole grew by 1 percent between the second quarters of 1982 and 1983. Among the major sectors within the division, employment in health services increased by 6.2 percent and employment in personal services rose by 15.4 percent. Sectors which registered negative growth were business services (-1.6 percent) and hotels and other lodging places (-11.9 percent).

The Arapahoe SDA should experience rapid population growth in the mid-1980's, and with the growth should come a concomitant demand for all types of services. Moderate to high growth rates in service division employment is expected through FY 1986.

The Trade Division

The division as a whole experienced a 1.1 percent growth rate between the second quarters of 1982 and 1983. Wholesale trade registered a 4.6 percent decline in employment, while retail trade registered a 2.7 percent growth in employment. Sectors posting strong gains were apparel and accessory stores (22.9 percent), building materials and garden supplies (14.9 percent) and eating and drinking places (6.9 percent).

High levels of aggregate demand and relatively stable prices should lead to moderate to high growth in the trade sector through FY 1985. Work has already commenced on several major developments in south Littleton which, when completed, will provide a significant number of trade-oriented jobs. Although rising interest rates on consumer loans in FY 1985 may affect activity in durable goods, it is doubtful that employment growth will be hindered to any great degree. Employment growth in FY 1986 is expected to be moderate to low.

The Construction Division

Employment in the division as a whole grew by 1.3 percent between the second quarters of 1982 and 1983. General building contractors experienced a 5.2 percent decline in employment, while heavy construction contractors registered a 2.8 percent growth and special trade contractors experienced a 4.3 percent growth.

Construction should prove to be one of the most active industrial divisions in the Arapahoe Service Delivery Area in FY's 1984 through 1986. A variety of major projects are either planned or are already under way in Arapahoe County, especially in south Littleton. The projects will include commercial, residential, and recreational facilities. In Aurora, AT&T Information Systems is expanding a data systems center that is scheduled to be completed by June 1984.

We expect moderate to high employment growth rates in all sectors of the construction division through FY 1985. The rate of increase of growth should decline slightly in FY 1986.

The Manufacturing Division

The division as a whole experienced an 8.6 percent decline in employment between the second quarters of 1982 and 1983. Among the major sectors within the division, machinery except electrical registered a 20.4 percent growth in employment, and employment in electric and electronic equipment remained virtually unchanged.

Increasing general economic activity in FY 1984 should help manufacturing in the Arapahoe SDA to return to positive employment growth rates. Increasing construction activity should spur employment growth in lumber and wood products and fabricated metals. Martin Marietta has announced plans to hire 200 additional workers by the end of June to work in its south Littleton facility. A low to moderate employment growth rate is expected through FY 1986.

The Finance, Insurance and Real Estate Division

The division exhibited a healthy 13 percent growth rate between the second quarters of 1982 and 1983. Major sectors within the division, in terms of number of persons employed, are credit agencies other than banks, real estate, and insurance carriers. These sectors registered growth rates of 20.5 percent, 2.9 percent, and 17.3 percent, respectively.

Increasing population and a growing demand for loans and financial services should lead to a moderate to high growth rate in this division through most of fiscal year 1985. Employment growth rates will be smaller in FY 1986, but rates should still be positive.

The Transportation, Communication and Public Utilities Division

Employment in the division as a whole grew by 19.7 percent between the second quarters of 1982 and 1983. Among the major employing sectors within the division, positive growth rates were registered by communication (29.5 percent), electric, gas, and sanitary services (22.2 percent), and trucking and warehousing (9 percent).

Employment growth in the division should be moderate to high through most of FY 1985. Increased construction of residential, commercial, and industrial facilities will lead to increased demand for electric, gas, and sanitary services. Increased trade and construction should help to maintain positive employment growth in trucking and warehousing.

The Public Administration Division

This division registered a 2.3 percent decline in employment between the second quarters of 1982 and 1983. We expect a low rate of growth in employment in this division through at least FY 1985. Much of this growth should be traceable to the justice, public order, and safety sector.

The Mining Division

The division as a whole experienced a 27.7 percent decline in employment between the second quarters of 1982 and 1983. Oil and gas extraction suffered a 19 percent decline and metal mining employment declined by 50.8 percent.

In the face of soft prices for oil, gas, and many metals, employment growth in this division in FY 1984 is expected to remain negative. In FY's 1985 and 1986, low to moderate growth rates are expected.

SDA 25 Arapahoe/Douglas Counties MONTHLY YEAR TO DATE
FOR PERIOD ENDING 02/29/84 PAGE 001

BOULDER COUNTY SERVICE DELIVERY AREA

GENERAL ECONOMIC ASSUMPTIONS UNDERLYING SERVICE DELIVERY AREA FORECASTS

The prediction of future employment levels forces the analyst to make certain assumptions about the behavior of several key economic variables during the time period in question (i.e., FY 1984-86, or July 1983 to June 1986). We assume that the following scenario will characterize the economy in the outlook period.

1) Fiscal and monetary policy at the national level will remain loose and expansionary through most of FY 1985. At that time the rate of growth in the money supply (M2) will slow significantly. Efforts will also be made to increase federal revenue and/or slow the rate of federal spending; however, these changes in fiscal policy will probably not have a significant effect until late in FY 1986. Interest rates on short-term bank loans to businesses will average about 13.5 percent during our three year outlook period.

2) The rate of increase in the overall price level will be somewhere within the 4-8 percent range. The nature of the inflation will be primarily demand-pull rather than cost-push.

3) Wage increases overall will not outpace productivity gains.

4) Consumption spending will remain fairly strong through FY 1985.

Industry divisions are analyzed in order of the number of the jobs that they provide to the local economy, with those providing the most jobs analyzed first.

Boulder County Service Delivery Area

The Manufacturing Division

Manufacturing has become the most important industry in Boulder County in terms of number of jobs provided. The division accounted for approximately one-third of the non-agricultural wage and salary employment in Boulder County in the second quarter of 1983.

The division as a whole experienced a 1.1 percent increase in employment between the second quarters of 1982 and 1983. Several major sectors within the division registered healthy increases, including instruments and related products (4.3 percent). Sectors which experienced negative growth were electrical and electronic equipment (-4.8 percent) and fabricated metal (-9.7 percent).

Fiscal years 1984 and 1985 should hold low to moderate growth rates for the manufacturing division. Continued strong aggregate demand and stable wage rates will contribute to employment growth. Also, since a significant proportion of Boulder County manufacturing is high-technology based, the division is better able to meet the growing demands of national and international competition.

The rate of increase in the growth rate will probably decline by FY 1986, due to slowing aggregate demand and increasing interest rates.

The Services Division

The division as a whole experienced a 1.9 percent decline in employment between the second quarters of 1982 and 1983. Major employing sectors within the division are educational, health, and business services. These sectors registered employment growth rates of -2.1 percent, 4.7 percent, and 7 percent, respectively. A large part of the decline in the service division as a whole can be traced to a decline in miscellaneous services (-27.4 percent).

Most sectors of the service division should experience moderate to high employment growth through FY 1985. The business, health, hotel and lodging, and personal service sectors should be particularly healthy. Employment in educational services will probably remain flat or grow only slightly.

The Trade Division

Employment in the division as a whole grew by 2.9 percent between the second quarters of 1982 and 1983. Wholesale trade employment grew by 1 percent, while employment in retail trade grew by 3.2 percent. Major employing sectors within the division are eating and drinking places, food stores, and auto dealers and service stations. These sectors experienced employment growth rates of 4.7, 2.4, and -0.4 percent, respectively.

If high levels of aggregate demand and stable prices continue, employment should continue to grow at moderate to high rates well into FY 1985. Rising interest rates in the latter half of FY 1985 may curtail spending on durable goods, and could affect employment levels in those sectors which sell durable goods. Overall, we expect moderate to high growth rates in retail through most of FY 1985, followed by a slowing in the rate of growth in FY 1986.

The Public Administration Division

The division as a whole experienced an 11.4 percent decline in employment between the second quarters of 1982 and 1983. However, executive, legislative and general, the largest employing sector within the division, registered a 1 percent employment growth during this period. Employment in this division should remain flat or decline in fiscal 1984, and grow very slightly in FY's 1985 and 1986.

The Construction Division

Employment in the division as a whole grew by 2.7 percent between the second quarters of 1982 and 1983. The division was led by an 8.9 percent employment growth in general building contractors. Within general building, residential building employment rose by 5.1 percent, and non-residential building employment declined by 9.8 percent.

Construction activity of multi-family units in Boulder County in 1983 was up approximately 250 percent over 1982, according to the Home Builders Association of Metropolitan Denver. There was also increased activity in single-family unit building, especially in Boulder City, Louisville, and Longmont. This activity should continue through FY 1984. If interest rates begin to rise in FY 1985, it may hinder new building and thereby curtail employment levels in construction. We expect low to moderate growth rates in construction employment in FY 1984, followed by low growth in FY 1985. Employment is expected to remain flat or grow slightly in FY 1986.

The Finance, Insurance, and Real Estate Division

The division as a whole registered a 5.8 percent increase in employment between the second quarters of 1982 and 1983. Among the major employing sectors within the division, banking and real estate registered 5.1 percent and 1.9 percent growth rates, respectively.

The FIRE division should register moderate to high employment growth through much of FY 1986, helped by moderate loan demand and by general population growth. Many banks and savings institutions are facing lower profit margins due to deregulation in the industry. These institutions are responding by imposing measures which would tend to reduce costs in the short and long run, such as automating particular customer services. These measures have obvious negative effects on employment levels in the industry.

The Transportation, Communications, and Public Utilities Division

The division as a whole experienced a 2.7 percent decline in employment between the second quarters of 1982 and 1983. Major employing sectors within the division are communication; trucking and warehousing; and electric, gas and sanitary services. These sectors experienced employment growth rates of -6.2 percent, -2.2 percent, and 2.6 percent, respectively.

Population increases and strong aggregate demand should lead to positive growth rates in this division through FY 1985. Trucking and warehousing, and electric, gas, and sanitary services should lead the division with moderate growth rates, while other sectors should register low but positive growth.

The Mining Division

Employment in mining comprises a very small proportion of the total employment in Boulder County. All of the mining employment occurs in three sectors: oil and gas extraction, non-metallic minerals, and metal mining. Between the second quarters of 1982 and 1983, these sectors registered employment growth rates of -3.3 percent, -9.6 percent, and 87.7 percent. It should be noted that metal mining employment began from a very low base; thus, the increase in the number employed was not large.

Oil and gas employment will probably remain flat or grow only slightly through most of FY 1986, with the prospect of stable prices for these commodities. Low to moderate growth rates should characterize employment in metal mining, as a firming of prices for gold and silver is expected.

DENVER COUNTY SERVICE DELIVERY AREA

GENERAL ECONOMIC ASSUMPTIONS UNDERLYING SERVICE DELIVERY AREA FORECASTS

The prediction of future employment levels forces the analyst to make certain assumptions about the behavior of several key economic variables during the time period in question (i.e., FY 1984-86, or July 1983 to June 1986). We assume that the following scenario will characterize the economy in the outlook period.

1) Fiscal and monetary policy at the national level will remain loose and expansionary through most of FY 1985. At that time the rate of growth in the money supply (M2) will slow significantly. Efforts will also be made to increase federal revenue and/or slow the rate of federal spending; however, these changes in fiscal policy will probably not have a significant effect until late in FY 1986. Interest rates on short-term bank loans to businesses will average about 13.5 percent during our three year outlook period.

2) The rate of increase in the overall price level will be somewhere within the 4-8 percent range. The nature of the inflation will be primarily demand-pull rather than cost-push.

3) Wage increases overall will not outpace productivity gains.

4) Consumption spending will remain fairly strong through FY 1985.

Industry divisions are analyzed in order of the number of the jobs that they provide to the local economy, with those providing the most jobs analyzed first.

Denver County Service Delivery Area

The Services Division

Between the second (calendar) quarters of 1982 and 1983, employment in the division as a whole increased by 3.7 percent. Among the major sectors within the services division, health services employment increased by 14.1 percent, and employment in business services remained virtually unchanged.

The service division is marked by relative buoyancy even in contractionary periods. The reasons for this are many and varied. One is that most services are relatively labor intensive, although the health services sector, among several others, has become increasingly capital intensive in recent years. The labor intensivity aspect allows services to remain relatively immune to the negative influence of high interest rates. Another reason for the relative strength of the services division is the demand inelasticity exhibited by services which many people consider essential, such as health, educational and social services.

Most services should exhibit low to moderate employment growth rates through FY 1985. Growth rates in health services may be slightly higher. In FY 1986, growth rates should level off and stabilize at some low to moderate level .

The Trade Division

The trade division exhibited the highest rate of growth of any major division between the second quarters of 1982 and 1983 (3.8 percent). Sectors within the division which exhibited the highest rates of growth during this period were wholesale durable goods (5.6 percent), retail food stores (20.0 percent) and miscellaneous retail (18.2 percent), which includes drug stores and liquor stores, among others. Sectors with the largest percentage decreases in employment during this period were general merchandise stores (-20.9 percent) and apparel and accessory stores (-15.1 percent).

On a national level, new orders for durable and consumer goods began rising in late 1982, indicating a growing level of aggregate demand. The high level of consumer confidence did not show signs of abating in early 1984. It is apparent that most consumers have adjusted their expenditure function to reflect the stubbornly high but relatively stable rates of interest on consumer loans. This is indicated by the consumer's increasing willingness to take on credit obligations throughout 1983.

We expect employment in trade to grow at a moderate rate through the first quarter of FY 1985. Interest rates will probably rise slightly in mid FY 1985. It is difficult to predict how consumers will react to this rise; however, it is expected that aggregate demand will be curtailed enough to affect employment growth rates in the trade division. Growth rates should average about 1.8 percent in fiscal years 1985 and 1986.

The Transportation, Communications, and Public Utilities Division

The division as a whole registered a very slight increase (0.3 percent) in employment between the second quarters of 1982 and 1983. The biggest gainers within the division, on a percentage basis, were air transportation (4.5 percent), transportation services (8.2 percent), and electric, gas and sanitary services (4.8 percent). Sectors which suffered employment losses were motor freight transportation and warehousing (-2.5 percent) and communications (-4.5 percent).

Employment levels in the air transportation sector experienced volatility in the last three years as the industry faced problems brought on by deregulation and labor-management conflict. The recent price increase by several major carriers is one indication that the industry is stabilizing. The general improvement in economic activity has also helped employment levels in the industry. We expect low growth rates in this sector through most of fiscal year 1985, followed by stable or declining growth rates in fiscal year 1986.

The communications sector should exhibit stable employment levels throughout fiscal 1985, but may show a decline in the general economic downturn expected by fiscal 1986.

Employment growth in the electric, gas and sanitary services will depend largely on the continued growth of residential construction. It is expected that the electric, gas and sanitary services sector will exhibit a low to moderate growth rate through most of fiscal 1985, after which growth rates will begin to decline.

The Finance, Insurance, and Real Estate Division

The FIRE division suffered a 1.6 percent decline in overall employment between the second quarters of 1982 and 1983. The banking sector declined by 2.6 percent, insurance carriers declined by 5.3 percent, and real estate declined by 7.3 percent. Positive growth rates were exhibited by credit agencies other than banks (4.2 percent), security and commodity brokers (15.5 percent) and holding and other investment offices (3.2 percent).

The shift in deposits from conventional banks to credit agencies other than banks is being reflected in employment shifts between these two sectors. Most financial institutions will probably be faced with falling profit margins in the face of deregulation in the industry. These factors, plus the increasing emphasis on productivity increases (partly represented by increasing automation) should keep overall employment growth rates at a low to moderate level through fiscal 1986.

The Manufacturing Division

Manufacturing as a whole in Denver County fell by 12.7 percent between the second quarters of 1982 and 1983. Nearly every sector within the division suffered employment losses during this time period. Manufacturing was one of the hardest hit of all the major industrial divisions during the 1982-83 recession. Many factors which characterized that contraction, including high interest rates, slackened aggregate demand, and high levels of competition from imported products, served to reduce employment in manufacturing.

The largest employing sectors in manufacturing in Denver County are printing, publishing, and allied industries; food and kindred products; and machinery, except electrical. Between the second quarters of 1982 and 1983, employment in printing and publishing remained virtually unchanged, while employment in food and machinery fell 3.6 percent and 31.6 percent, respectively.

Currently on the national scene, production of raw steel, autos, paper, and lumber are on the rise while industrial materials prices are also gaining. Businesses have only recently begun to increase outlays on new structures, as many of them have approached production capacity. Prior to the first calendar quarter of 1984, the major part of capital spending was on items that could be financed with short-term credit, such as computer equipment. Since high levels of capital spending have historically acted as a sustaining force in the later years of recovery, a lack of a capital spending boom may be one factor that will hinder chances for a sustained recovery by late 1985.

We expect a low rate of growth in manufacturing employment to rise somewhat in fiscal 1985, followed by a drop in early 1986.

The Construction Division

Employment in the division as a whole fell by 7.5 percent between the second quarters of 1982 and 1983. Among the sectors within the division, employment in general building contractors fell 16.4 percent and special trade contract construction fell by 8 percent.

The construction industry rebounded admirably from the 1982-83 recession. The 12 month average in the number of new residential construction permits ending in December 1983 increased by 180 percent over the previous 12 month average. The fact that this occurred even in the face of stubbornly high mortgage rates serves to illustrate the strength in the rebound of aggregate demand following the recession.

We expect employment growth rates in residential construction to remain at moderate levels through much of fiscal 1985. Although residential vacancy rates are rather high in some parts of Denver County, there is a significant portion of vacant land that has been zoned for multi-family dwellings. The anticipation of population growth in the Denver metro area should spur continued construction.

Employment growth in non-residential construction should remain at low to moderate levels through most of fiscal 1985. Continuing high vacancy rates for office space should act as a buffer on new non-residential projects. Low growth rates can also be expected in the construction other than building sector, as work continues on several major thoroughfares in Denver.

Public Administration

The division as a whole experienced a 15.6 percent decline in employment between the second quarters of 1982 and 1983. We expect a slow recovery in employment growth rates in the division in fiscal years 1985 and 1986, as public coffers are helped by the economic recovery and stabilized federal aid.

Mining

Most of the mining employment in Denver County is by nature white-collar. A large proportion of the oil operating companies in the state have their headquarters in Denver. In the mining division as a whole, employment fell by 3.2 percent during the same time period.

Oil and gas well drilling in Colorado was down 26.2 percent in 1983 from 1982, according to Petroleum Information Corporation of Denver. However, there were 2 percent more oil companies in the Denver metro area at the beginning of 1984 over the beginning of 1983, according to the Western Oil Reporter. Soft prices for oil and gas are expected to continue through fiscal 1984. We expect employment in oil and gas extraction to exhibit negative growth rates through fiscal 1984, followed by low but positive growth rates in fiscal 1985 and fiscal 1986.

Employment growth rates in coal and uranium mining are expected to remain flat or decline, owing to high transportation costs and depressed demand in the coal industry, and the increasing number of nuclear plant shutdowns.

Employment growth in gold and silver mining may pick up slightly because of higher projected demand and higher prices. Gold and silver have important high-tech applications.

EL PASO COUNTY SERVICE DELIVERY AREA

GENERAL ECONOMIC ASSUMPTIONS UNDERLYING SERVICE DELIVERY AREA FORECASTS

The prediction of future employment levels forces the analyst to make certain assumptions about the behavior of several key economic variables during the time period in question (i.e., FY 1984-86, or July 1983 to June 1986). We assume that the following scenario will characterize the economy in the outlook period.

1) Fiscal and monetary policy at the national level will remain loose and expansionary through most of FY 1985. At that time the rate of growth in the money supply (M2) will slow significantly. Efforts will also be made to increase federal revenue and/or slow the rate of federal spending; however, these changes in fiscal policy will probably not have a significant effect until late in FY 1986. Interest rates on short-term bank loans to businesses will average about 13.5 percent during our three year outlook period.

2) The rate of increase in the overall price level will be somewhere within the 4-8 percent range. The nature of the inflation will be primarily demand-pull rather than cost-push.

3) Wage increases overall will not outpace productivity gains.

4) Consumption spending will remain fairly strong through FY 1985.

Industry divisions are analyzed in order of the number of the jobs that they provide to the local economy, with those providing the most jobs analyzed first.

El Paso County Service Delivery Area

The Services Division

Employment in services grew by a healthy 5.8 percent between the second quarters of 1982 and 1983. Major employing sectors within the division are educational, health, and business services. These sectors experienced growth rates of 11.4, 1.1, and 10.4 percent, respectively.

Several trends that are presently occurring in El Paso County point to an increase in the demand for services. Continuing population growth will lead to an increasing demand for personal, health, and social services. The bustling business sector will demand business, hotel, and miscellaneous services. Amusement, recreation, and motion picture services will be buoyed by strong levels of aggregate demand.

We expect moderate to high employment growth rates in the service division well into FY 1986. At that point in time, a general slowdown in economic activity should slow the demand for most services, and thereby slow the rate of growth in service employment.

The Trade Division

Employment in the division as a whole increased by 3.9 percent between the second quarters of 1982 and 1983. Retail trade employment rose by 4.5 percent, while employment in wholesale trade remained virtually unchanged.

Several factors which characterize the current recovery, i.e., relatively stable prices and wages, strong consumer spending, and stable, albeit high, interest rates, are helping to buoy employment levels in trade. Strong employment growth in auto dealers and furniture and home furnishings, both of which are durable good sectors, demonstrate a relative insensitivity on the part of consumers to high interest rates.

We expect strong employment growth in trade through much of FY 1986. Moderate growth should occur in all sectors of the division.

The Manufacturing Division

Employment in the division as a whole grew by 3.5 percent between the second quarters of 1982 and 1983. Sectors with exceptionally high growth were electrical and electronic equipment (22.9 percent), and machinery except electrical (39.8 percent). Major employing sectors which posted losses were printing and publishing (-2.0 percent), and fabricated metal (-3.6 percent).

The early 80's manufacturing boom in El Paso County (31 percent growth between the first quarters of 1980 and 1982) has subsided somewhat in the mid-80's. However, it is expected that the large employing sectors will continue to grow at a moderate pace through FY 1985. Increasing construction activity should help to increase employment levels in lumber and wood products and fabricated metals.

In FY's 1984 and 1985, the division as a whole should register moderate growth rates. The rate of increase in employment growth should slow somewhat in FY 1986, due to a slowdown in general economic activity.

The Transportation, Communication, and Public Utilities Division

The division as a whole registered a 2.7 percent decline in employment between the second quarters of 1982 and 1983. Major employing sectors and their corresponding employment growth rates are communication (-8.3), electric, gas, and sanitary services (-0.6 percent), and trucking and warehousing (-1.4 percent).

Employment growth in communications and electric, gas, and sanitary services are to a significant degree dependent on increases in population and construction activity. Given our expectation of positive movement in both of these variables, the communication and public utilities sectors should experience moderate to high growth through FY 1985, followed by low growth rates in FY 1986.

Employment growth in trucking and warehousing should follow roughly the same pattern as the above, reflecting generally high levels of economic activity.

The Finance, Insurance and Real Estate Division

The division as a whole registered a 10.1 percent increase in employment between the second quarters of 1982 and 1983. Major employing sectors and their respective growth rates were real estate (18.8), banking (1.0), insurance carriers (10.5), and credit agencies other than banks (8.1).

The booming trade, construction, and manufacturing sectors should bolster employment levels in the FIRE division through FY 1985. Moderate to high growth rates are expected in credit agencies other than banks, insurance carriers, and real estate. Banking should experience low to moderate growth rates in employment.

The Construction Division

The employment growth rate in the division as a whole was 4.7 percent between the second quarters of 1982 and 1983. The growth was concentrated in general building contractors and special trade contractors. These sectors registered growth rates of 12.3 percent and 5.6 percent, respectively. Within the general building sector, growth was concentrated in residential construction, which posted a 35.5 percent employment growth rate in this period.

Construction on the Consolidated Space Operations Center was scheduled to start in February 1984, and continue until mid-1986. This project is expected to lead to a significant increase in construction hiring in El Paso County. When completed, the center will undoubtedly lead to growth in the activity of other industrial divisions.

We expect construction employment to grow at moderate to high rates through FY 1985, followed by low growth in FY 1986.

The Public Administration Division

The division as a whole experienced a 35 percent decline in employment between the second quarters of 1982 and 1983, although the justice, order, and public safety sector posted a 68.9 percent gain during the same period.

The Consolidated Space Operations Center is expected to become operational in 1987. At that time, it should employ approximately 1000 air force personnel and 1000 civilian technicians. When fully operational, the center will employ about 2000 military personnel and 3000 civilians.

In the meantime, employment in the division as a whole is expected to grow at a low rate through FY 1986, with a significant portion of the increase coming in the justice, order, and public safety sector.

The Mining Division

Employment in mining constitutes an extremely small portion of the total employment in El Paso County. Between the second quarters of 1982 and 1983, employment in the mining division decreased by 2.1 percent.

With steady prices for oil and gas, we expect employment in the mining division to grow at a low rate in FY 1985 and FY 1986, with most of the increase attributable to the non-metallic minerals sector.

GENERAL ECONOMIC ASSUMPTIONS UNDERLYING SERVICE DELIVERY AREA FORECASTS

The prediction of future employment levels forces the analyst to make certain assumptions about the behavior of several key economic variables during the time period in question (i.e., FY 1984-86, or July 1983 to June 1986). We assume that the following scenario will characterize the economy in the outlook period.

1) Fiscal and monetary policy at the national level will remain loose and expansionary through most of FY 1985. At that time the rate of growth in the money supply (M2) will slow significantly. Efforts will also be made to increase federal revenue and/or slow the rate of federal spending; however, these changes in fiscal policy will probably not have a significant effect until late in FY 1986. Interest rates on short-term bank loans to businesses will average about 13.5 percent during our three year outlook period.

2) The rate of increase in the overall price level will be somewhere within the 4-8 percent range. The nature of the inflation will be primarily demand-pull rather than cost-push.

3) Wage increases overall will not outpace productivity gains.

4) Consumption spending will remain fairly strong through FY 1985.

Industry divisions are analyzed in order of the number of the jobs that they provide to the local economy, with those providing the most jobs analyzed first.

Jefferson Service Delivery Area Consortium

The Services Division

The division as a whole experienced a 1.7 percent growth in employment between the second quarters of 1982 and 1983. Major employing sectors within the division include educational, health, and business services. Employment growth rates in health and business services were 1 percent and 3.4 percent, respectively.

In fiscal years 1984 through 1986, population growth in the Jefferson SDA is expected to be one of the highest in percentage terms of any area in the state. Increase in population and income will undoubtedly lead to increased demand for many types of services, and thereby increase employment in services.

We expect a moderate to high growth rate for the division through FY 1985, followed by a low growth rate in FY 1986.

The Trade Division

Employment in the division as a whole grew by 4.4 percent between the second quarters of 1982 and 1983. Wholesale trade employment experienced a 4.4 percent decline during this period, while retail employment grew by 5.7 percent. Among the major employing sectors in retail, eating and drinking places grew by 4.7 percent and food stores grew by 6.3 percent.

Population increases, strong aggregate demand, and relatively stable prices are factors which should spur employment growth in trade through FY 1986. Employment should grow at moderate to high rates through FY 1985, followed by a low growth rate in FY 1986.

The Manufacturing Division

The division as a whole experienced a 21.3 percent decline in employment between the second quarters of 1982 and 1983. Factors which contributed to the decline were increasing competition from abroad, high interest rates and generally low levels of aggregate demand.

The employment situation in manufacturing is expected to improve throughout FY 1986. There are several reasons behind this optimism. Martin Marietta announced in February 1984 that it would hire 800 additional workers by June 1984, due to its winning several major contracts. Second, Jefferson County boasts one of the highest growth rates for high-tech firms of any county in the state. Finally, increasing construction activity and population growth should boost employment levels in several manufacturing sectors, including stone, clay, and glass products and fabricated metal products.

The Public Administration Division

Employment in the division as a whole declined by 5.2 percent between the second quarters of 1982 and 1983. A large portion of the decline can be traced to employment losses in the environmental quality and housing sector.

Rapid employment growth and increases in the tax base should lead to employment gains in some sectors of the division through FY 1986. We expect low but positive employment growth rates in general government and in the justice, order, and public safety sector.

The Construction Division

Employment in the division as a whole declined by 0.6 percent between the second quarters of 1982 and 1983. Within general building contractors, employment in residential building grew by 17.8 percent while employment in non-residential contractors fell by 8.2 percent. Employment in heavy construction contractors fell by 9.5 percent while special trade contractors registered a 1.9 percent growth rate.

The number of building permits for single-family units increased by 246 percent in 1983 over 1982. Increased construction activity is expected to continue into FY 1985, during which we expect a slight increase in interest rates. This development may curtail construction activity in FY 1986.

Employment should grow at a moderate to high rate through FY 1985, with most of the increase coming in general construction and special trades contractors.

The Finance, Insurance, and Real Estate Division

Employment in the division as a whole grew by 5.7 percent between the second quarters of 1982 and 1983. Among major employing sectors, banking employment rose by 38.2 percent, credit agencies other than banks rose by 14.6 percent, and insurance carriers increased by 13.7 percent. Real estate employment fell by 2 percent.

Given the growing population and economy in the **Jefferson** SDA, demand for services provided by this division should remain relatively high during our outlook period. The division as a whole should grow at a moderate to high rate through FY 1985, followed by a moderate to low growth rate in FY 1986.

The Transportation, Communications, and Public Utilities Division

Employment in the division as a whole remained virtually unchanged between the second quarters of 1982 and 1983. In fiscal years 1984 and 1985, we expect low to moderate employment growth rates in the transportation and warehousing and public utilities sectors, due to increasing population and construction activity. Employment in communciations should remain flat or grow only slightly during our outlook period.

In FY 1986, the division as a whole should exhibit a low but positive growth rate.

The Mining Division

The division as a whole registered a 37.8 percent decline in employment between the second quarters of 1982 and 1983. Sectors which posted large employment losses were metal mining and oil and gas extraction.

Employment gains in the division can be expected only if a firming of prices and an increase in production occurs for metals and oil and gas. If this scenario does occur, we may expect moderate growth rates in the division in FY 1985.

LARIMER COUNTY SERVICE DELIVERY AREA

GENERAL ECONOMIC ASSUMPTIONS UNDERLYING SERVICE DELIVERY AREA FORECASTS

The prediction of future employment levels forces the analyst to make certain assumptions about the behavior of several key economic variables during the time period in question (i.e., FY 1984-86, or July 1983 to June 1986). We assume that the following scenario will characterize the economy in the outlook period.

1) Fiscal and monetary policy at the national level will remain loose and expansionary through most of FY 1985. At that time the rate of growth in the money supply (M2) will slow significantly. Efforts will also be made to increase federal revenue and/or slow the rate of federal spending; however, these changes in fiscal policy will probably not have a significant effect until late in FY 1986. Interest rates on short-term bank loans to businesses will average about 13.5 percent during our three year outlook period.

2) The rate of increase in the overall price level will be somewhere within the 4-8 percent range. The nature of the inflation will be primarily demand-pull rather than cost-push.

3) Wage increases overall will not outpace productivity gains.

4) Consumption spending will remain fairly strong through FY 1985.

Industry divisions are analyzed in order of the number of the jobs that they provide to the local economy, with those providing the most jobs analyzed first.

Larimer County Service Delivery Area

The Services Division

Employment in services grew by 1.6 percent between the second quarters of 1982 and 1983. Growth rates in major employing sectors were: education (0.6 percent), health (4.2 percent), business (12.1 percent) and miscellaneous services (29.2 percent).

Demand for most services is largely dependent on growth in population and income. Both of these variables are expected to continue growing through FY 1986. Therefore, we expect service employment to grow at a moderate to high rate through FY 1985, followed by a low to moderate growth rate in FY 1986.

The Trade Division

Employment in trade as a whole grew by 0.9 percent between the second quarters of 1982 and 1983. Wholesale trade grew by 17.5 percent, while retail trade employment declined by 1.1 percent.

Major employing sectors in retail are eating and drinking places, food stores, and auto dealers and service stations. These sectors exhibited employment growth rates of -4.3 percent, 4.8 percent, and 7.2 percent, respectively.

Strong consumer spending and stable wage levels should bolster trade employment in fiscal years 1984 and 1985, although sales of durable goods may be affected by rising interest rates in FY 1985. Low to moderate employment growth rates are expected through FY 1985, followed by low growth rates in FY 1986.

The Manufacturing Division

Employment in the division as a whole declined by 6.5 percent between the second quarters of 1982 and 1983. Major employing sectors in manufacturing are machinery except electrical, electric and electronic equipment, and printing and publishing. Rates of change in employment in these sectors were -11.1 percent, 5.4 percent, and 12.4 percent, respectively.

Citizen approval of the proposed Anhauser Busch brewery is still pending at this writing. If the new brewery is approved, it is expected to provide approximately 550 new jobs upon completion. Brewery production could also spur the birth of other manufacturing firms in the area.

We expect employment in the division as a whole to grow at low to moderate rates through FY 1986.

The Construction Division

Employment in the division as a whole grew by 22.4 percent between the second quarters of 1982 and 1983. General construction employment grew by 16.3 percent, with most of the growth coming in residential construction. Special trades construction rose by 42.9 percent.

1983 was a good year for the Fort Collins housing market, with residents there purchasing 4,326 homes. Strong housing construction is expected to continue through FY 1984, but the market may be hurt by rising interest rates by late FY 1985. Approval of the proposed Anhauser Busch brewery would provide a significant number of construction jobs in our outlook period.

The division as a whole should exhibit moderate to high employment growth in FY 1985, followed by low to moderate growth in FY's 1985 and 1986.

The Public Administration Division

The division as a whole experienced a 0.3 percent decline in employment between the second quarters of 1982 and 1983. Losses in administration of economic programs and environmental quality and housing were largely offset by an 8.3 percent employment gain in the executive, legislative, and general government sector.

Continuing budget cuts in the public sector are expected to affect employment levels in this division in FY 1984. In FY's 1985 and 1986, growing population and demand for public services are expected to buoy employment levels. Low but positive employment growth rates are expected in general government and in justice, order, and public safety.

The Finance, Insurance, and Real Estate Division

Employment in the division as a whole grew by 4.7 percent between the second quarters of 1982 and 1983. Major employing sectors in the division are banking, real estate, and credit agencies other than banks. These sectors registered employment growth rates of 5 percent, 0.4 percent, and 2.9 percent, respectively.

In September of 1983, bank deposits in Fort Collins were 14 percent higher than in September of 1982. With a growing population and strong loan demand, the division should be characterized by positive employment growth through FY 1985. Higher interest rates and housing prices may begin to adversely affect employment growth in FY 1986.

Moderate employment growth is expected through FY 1985, followed by low but positive growth in FY 1986.

The Transportation, Communications, and Public Utilities Division

The division as a whole experienced a 0.8 percent increase in employment between the second quarters of 1982 and 1983. Among the major employing sectors in the division, electric, gas, and sanitary services employment increased by 27.3 percent, while trucking and warehousing employment rose by 14.2 percent and communications employment declined by 15.9 percent.

Increases in population and residential construction are largely responsible for demand increases for public utilities. Given our expectation of substantial construction activity through FY 1985, the public utilities sector should experience low to moderate employment growth rates in this period. An active business sector should buoy employment levels in the trucking and warehousing sector.

We expect a low to moderate growth rate for the division in FY's 1984 and 1985, followed by a low growth rate in FY 1986.

The Mining Division

Mining comprises a very small proportion of the total employment in Larimer County. The majority of the employment within mining is in the nonmetallic minerals except fuels sector, which registered a 4.9 percent decline in employment between the second quarters of 1982 and 1983.

Strong construction activity in FY's 1984 and 1985 may help buoy employment levels in this division. Employment is expected to remain flat or grow very slightly.

GENERAL ECONOMIC ASSUMPTIONS UNDERLYING SERVICE DELIVERY AREA FORECASTS

The prediction of future employment levels forces the analyst to make certain assumptions about the behavior of several key economic variables during the time period in question (i.e., FY 1984-86, or July 1983 to June 1986). We assume that the following scenario will characterize the economy in the outlook period.

1) Fiscal and monetary policy at the national level will remain loose and expansionary through most of FY 1985. At that time the rate of growth in the money supply (M2) will slow significantly. Efforts will also be made to increase federal revenue and/or slow the rate of federal spending; however, these changes in fiscal policy will probably not have a significant effect until late in FY 1986. Interest rates on short-term bank loans to businesses will average about 13.5 percent during our three year outlook period.

2) The rate of increase in the overall price level will be somewhere within the 4-8 percent range. The nature of the inflation will be primarily demand-pull rather than cost-push.

3) Wage increases overall will not outpace productivity gains.

4) Consumption spending will remain fairly strong through FY 1985.

Industry divisions are analyzed in order of the number of the jobs that they provide to the local economy, with those providing the most jobs analyzed first.

Office of Rural Job Training Service Delivery Area

The Services Division

Employment in the division as a whole grew by 1 percent between the second quarters of 1982 and 1983. Major employing sectors in the division are educational, health, and hotel and lodging services. Rates of change in employment in these sectors were 3.7, 4.1, and -2.2 percent, respectively.

With strong tourist activity and increasing population in FY 1984, employment levels in services are expected to increase. Tourist activity, measured by national park recreational visits and number of skier days, is up in FY 1984 over FY 1983. Tourist dollars are quite important to the local economies in many areas of the service delivery area.

We expect a low to moderate growth rate in employment through FY 1984, followed by a low growth rate in FY 1985 and relatively flat employment levels in FY 1986.

The Trade Division

Employment in trade declined by 4.1 percent between the second quarters of 1982 and 1983. Wholesale employment fell by 8.4 percent while retail employment fell by 3.3 percent. Within retail, major employing sectors are eating and drinking places, food stores, and miscellaneous retail (drug stores, liquor stores etc.). Rates of change in employment in these sectors were -2.9, 0.5, and 0.5 percent, respectively.

Sub-areas of the SDA which attract a large number of tourist dollars should experience low to moderate trade employment growth in FY's 1984 and 1985, followed by low growth rates in FY 1986. In most non-tourist areas of the SDA, consumer spending is expected to remain flat or grow only slightly, indicating sluggish employment growth in the trade division.

The Construction Division

All major sectors within the division registered employment losses between the second quarters of 1982 and 1983. Among major sectors, general construction employment declined by 15.5 percent, heavy construction employment fell by 19.4 percent, and special trade employment declined by 12.6 percent.

Construction activity across the service delivery area has varied substantially from county to county. In September of 1983, the value of new construction contracts in Grand Junction and Lamar was down by 0.3 percent and 43.1 percent respectively over September of 1982. On the other hand, the value of new contracts in Gunnison and Fort Morgan was up by 1463 percent and 418 percent, respectively during the same period. Building activity in a large portion of the western slope counties is still being affected by the decline in energy development in that area.

Employment in the service delivery area as a whole is expected to grow at low rates through FY 1986.

The Public Administration Division

Employment in the division as a whole remained virtually unchanged between the second quarters of 1982 and 1983. Negative employment growth is expected in this division in FY 1984 followed by low but positive growth in FY's 1985 and 1986.

The Transportation, Communication, and Public Utilities Division

The division as a whole registered a 7.5 percent employment decline between the second quarters of 1982 and 1983. Major employing sectors within the division are electric, gas, and sanitary services; communication; and trucking and warehousing. These sectors registered rates of change in employment of 0.8 percent, -10.5 percent, and -27.7 percent, respectively.

With rather sluggish construction and trade activity expected during most of our outlook period, employment growth in transportation and public utilities is expected to be sluggish also. The division should post low but positive growth rates through FY 1986.

The Finance, Insurance, and Real Estate Division

Employment in the division as a whole grew by 3.4 percent between the second quarters of 1982 and 1983. Major employing sectors in the division and their percentage changes in employment were real estate (5.7), banking (0.5) and credit agencies other than banks (5.4).

In selected cities around the SDA, bank deposits in September of 1983 were generally higher than they were in September of 1982. Even though higher bank deposits generally indicate that more funds are available for lending, high interest rates may still prohibit active borrowing.

In FY 1984, employment levels in the division should increase slightly. In FY's 1985 and 1986, higher interest rates and a slowing of population growth are factors which will contribute to declining but still positive growth rates in the division.

The Manufacturing Division

Employment in manufacturing declined by 5.9 percent between the second quarters of 1982 and 1983. Major employing sectors and their percentage changes in employment are food products (0.0), printing and publishing (1.6), and stone, clay, and glass products (-15.3).

Minimal change is expected in manufacturing employment during our outlook period. A strong economy should boost employment levels slightly in FY 1984. Manufacturing should be characterized by relatively flat employment levels in FY's 1985 and 1986.

The Mining Division

The division as a whole registered a 22.4 percent decline in employment between the second quarters of 1982 and 1983. All major sectors within the division (i.e., bituminous coal and lignite, oil and gas, and metal mining) experienced employment declines during this period.

The coal industry has been plagued by high transportation costs, while soft prices and declining demand for uranium and oil and gas have led to lower levels of production and employment.

Employment in the mining division is expected to remain flat or grow only slightly during our outlook period.

GENERAL ECONOMIC ASSUMPTIONS UNDERLYING SERVICE DELIVERY AREA FORECASTS

The prediction of future employment levels forces the analyst to make certain assumptions about the behavior of several key economic variables during the time period in question (i.e., FY 1984-86, or July 1983 to June 1986). We assume that the following scenario will characterize the economy in the outlook period.

1) Fiscal and monetary policy at the national level will remain loose and expansionary through most of FY 1985. At that time the rate of growth in the money supply (M2) will slow significantly. Efforts will also be made to increase federal revenue and/or slow the rate of federal spending; however, these changes in fiscal policy will probably not have a significant effect until late in FY 1986. Interest rates on short-term bank loans to businesses will average about 13.5 percent during our three year outlook period.

2) The rate of increase in the overall price level will be somewhere within the 4-8 percent range. The nature of the inflation will be primarily demand-pull rather than cost-push.

3) Wage increases overall will not outpace productivity gains.

4) Consumption spending will remain fairly strong through FY 1985.

Industry divisions are analyzed in order of the number of the jobs that they provide to the local economy, with those providing the most jobs analyzed first.

Pueblo Service Delivery Area

The Services Division

The division as a whole registered a 6.4 percent decline in employment between the second quarters of 1982 and 1983. Major employing sectors within the division are the health, educational, and social services sectors. These sectors registered employment growth rates of -10.6 percent, -0.4 percent, and 6.9 percent, respectively. With the social services sector, employment in job training and related services increased by 27.4 percent.

There were signs of improvement in economic conditions in the Pueblo SDA at the beginning and middle of FY 1984. In September 1983, electric power consumption, construction permits, and bank deposits were all up over September 1982 levels. Approximately 770 miners will be returning to work in the Climax Molybdenum Mine in Lake County. As employment in most service sectors is dependent upon strong aggregate demand, all of these signs bode well for the services division in our outlook period.

We expect employment in services to grow at a low but positive rate through FY 1986.

The Trade Division

Employment in the division as a whole fell by 3.9 percent between the second quarters of 1982 and 1983. Employment in retail trade declined by 3.9 percent while employment in wholesale trade declined by 3.7 percent. Within the wholesale trade sector, durable goods employment rose by 0.6 percent while non-durable goods employment fell by 8.9 percent. Within retail trade, rates of change in employment for major sectors were -2.8 percent in eating and drinking places, -1.9 percent in food stores, and 0.6 percent in auto dealers and gas stations.

Prospects for trade employment are expected to improve in FY's 1984 and 1985, due to relatively strong aggregate demand, stable wages and relatively stable prices. Employment should grow at low but positive rates through FY 1986.

The Public Administration Division

High levels of unemployment in the last several years, coupled with declining federal aid to cities, has led to lower levels of employment in public administration. In the Pueblo Service Delivery Area, employment in public administration will probably continue to decline through FY 1985. Employment levels are expected to level off by FY 1986.

The Manufacturing Division

Employment in the division as a whole declined by 20.2 percent between the second quarters of 1982 and 1983. The division was beset with problems in the early 1980's that were brought on by increasing international competition, high costs of production, and slack aggregate demand.

The recent announcement by Sperry Corporation officials of plans to build a new $10 million navigational computer manufacturing plant in Pueblo should provide an impetus for future high-tech employment growth in the area. It is expected that operation of the new plant will inject approximately $44 million annually to Pueblo's economy. The Sperry plant will employ about 1000 people when completed.

Employment in the manufacturing division is expected to remain flat or grow only slightly in FY 1984, followed by a low to moderate rate of growth in FY's 1985 and 1986.

The Transportation, Communications, and Public Utilities Division

The division as a whole experienced a 9.8 percent decline in employment between the second quarters of 1982 and 1983. Major employing sectors within the division are electric, gas, and sanitary services; communication; and trucking and warehousing. These sectors experienced rates of change in employment of -2.1 percent, -17.3 percent, and -17.5 percent, respectively.

Electric power consumption in Pueblo in September of 1983 was 6.1 percent higher than in September of 1982. Employment growth in public utilities is generally dependent on growth in residential and commercial construction, which in turn increases demand for utilities.

With increasing economic activity in FY's 1984 and 1985, the transportation, communications, and public utilities division should experience low but positive growth rates during this period. In FY 1986, employment in the division should remain flat or decline.

The Construction Division

Employment in the division as a whole declined by 9.7 percent between the second quarters of 1982 and 1983. General contract construction declined by 14.2 percent, heavy construction employment fell by 3.8 percent, and special trade contract employment fell by 10.5 percent.

Employment in construction is expected to remain flat in FY's 1984 and 1985, followed by declining employment levels in FY 1986.

The Finance, Insurance and Real Estate Division

This division was one of the few to experience positive employment growth between the second quarters of 1982 and 1983. The division as a whole registered a 2.3 percent employment growth. Among major employing sectors in the division, banking employment declined by 2.4 percent, credit agencies other than banks gained by 12.6 percent, and real estate employment rose by 2.7 percent.

Deposits in Pueblo banks in September of 1983 were 9.9 percent larger than in September of 1982. Completion of the Sperry plant in mid-FY 1985 and its concomitant boost to manufacturing employment should lead to an increased demand for services provided by this division. However, rising interest rates in FY 1985 may hinder the birth of small firms and thus prevent loan demand from rising significantly.

We expect a low to moderate employment growth rate for the division in FY 1984, followed by flat or declining employment conditions in FY's 1985 and 1986.

The Mining Division

The majority of the employment in this division resides in the metal mining sector. Employment levels declined dramatically in 1981-1983 largely due to the nationwide decline in the demand for steel.

In early March, officials of the Climax Molybdenum Mine in Lake County announced that the mine would be reopened, and 772 workers would return to work. The Henderson Mine reopened in January 1984, and employs about 650 people. Although the mines are operating at far below the employment levels that they were at before the 1982-1983 recession, the rehiring still constitutes a significant boost for the mining division.

The division is expected to show moderate [illegible] high levels of employment growth in FY's 1984 and 1985, followed by relatively flat employment levels in FY 1986.

WELD COUNTY SERVICE DELIVERY AREA

GENERAL ECONOMIC ASSUMPTIONS UNDERLYING SERVICE DELIVERY AREA FORECASTS

The prediction of future employment levels forces the analyst to make certain assumptions about the behavior of several key economic variables during the time period in question (i.e., FY 1984-86, or July 1983 to June 1986). We assume that the following scenario will characterize the economy in the outlook period.

1) Fiscal and monetary policy at the national level will remain loose and expansionary through most of FY 1985. At that time the rate of growth in the money supply (M2) will slow significantly. Efforts will also be made to increase federal revenue and/or slow the rate of federal spending; however, these changes in fiscal policy will probably not have a significant effect until late in FY 1986. Interest rates on short-term bank loans to businesses will average about 13.5 percent during our three year outlook period.

2) The rate of increase in the overall price level will be somewhere within the 4-8 percent range. The nature of the inflation will be primarily demand-pull rather than cost-push.

3) Wage increases overall will not outpace productivity gains.

4) Consumption spending will remain fairly strong through FY 1985.

Industry divisions are analyzed in order of the number of the jobs that they provide to the local economy, with those providing the most jobs analyzed first.

Weld County Service Delivery Area

The Services Division

Major employing sectors within the division are educational, health, and business services. These sectors posted -1.8, 9.4, and 25.0 percent changes in employment between the second quarters of 1982 and 1983. Employment in the division as a whole increased by 2.2 percent between the second quarters of 1982 and 1983.

Population increases and strong consumer spending should lead to continuing favorable employment conditions in most service sectors through fiscal year 1985. Low to moderate growth rates are expected in personal, health, and business services, while employment in educational services should remain flat or decline.

The Trade Division

Employment in the division as a whole fell by 2.9 percent between the second quarters of 1982 and 1983. Employment in wholesale trade declined by 12.1 percent, while employment in retail trade increased by 0.3 percent. In retail, major employing sectors are eating and drinking places, food stores, and miscellaneous retail. These sectors registered employment growth rates of 1 percent, 11.1 percent, and 2.8 percent, respectively.

Given our expectation of relatively strong consumer spending through most of FY 1985, employment in trade is expected to grow at a low rate in FY's 1984 and 1985. Most of the employment growth will probably take place in nondurable goods sectors, as sales of durable goods may be affected by rising interest rates.

In FY 1986, trade employment will probably remain flat or grow only slightly.

The Manufacturing Division

Employment in the division as a whole increased by 15 percent between the second quarters of 1982 and 1983. Major employing sectors in the division are instruments and related products, food production, and machinery except electrical. Food production and machinery except electrical registered strong employment growth rates during this period.

The manufacturing division is expected to register low to moderate growth rates in FY's 1984 and 1985, followed by low rates or no growth in FY 1986.

The Public Administration Division

The division as a whole registered a 1.7 percent growth in employment between the second quarters of 1982 and 1983. Most of the growth can be traced to the executive, legislative, and general government sector.

Employment in the division is expected to grow very slightly in FY's 1984 and 1985, with most of the growth coming in the general government and justice, public order, and safety sectors.

The Construction Division

Employment in the division as a whole declined by 6.1 percent between the second quarters of 1982 and 1983. Employment in residential construction increased by

6.4 percent, while employment in non-residential construction fell by 21.3 percent. Heavy construction employment increased by 3.2 percent and special trades construction fell by 1.9 percent.

In September 1983, the value of residential and non-residential construction contracts in Greeley was about 500 percent higher than in September of 1982. Although strong construction activity is expected to continue through FY 1984, rising interest rates may lead to a fall in the level of home buying by late FY 1985.

Employment levels in construction are expected to grow at low but positive rates in FY's 1984 and 1985. Employment levels should remain flat or decline in FY 1986.

The Transportation, Communications and Public Utilities Division

Employment in the division as a whole declined by 7.8 percent between the second quarters of 1982 and 1983. Among major employing sectors in the division, trucking and warehousing experienced a 7.2 percent employment decline, while employment in electric, gas, and sanitary services grew by 1.4 percent.

Population increases and a healthy construction sector should provide the public utilities sector with an impetus for employment growth in FY 1984. A growing business sector and strong aggregate demand should bode well for trucking and warehousing employment.

Low to moderate growth is expected for the division in FY 1984, followed by a low growth rate in FY 1985 and FY 1986.

The Finance, Insurance, and Real Estate Division

Employment in the division as a whole remained virtually unchanged between the second quarters of 1982 and 1983. Among major employing sectors, banking registered a 4.3 percent decline in employment, while employment in the insurance sector increased by 1.6 percent. Real estate employment increased by 6.6 percent.

In September 1983, deposits in nine Greeley banks were 17 percent higher than they were in September of 1982. With strong consumer and business demand for credit and continuing construction activity, the division as a whole should register a low but positive growth rate well into FY 1985. Rising interest rates may lead to a decreased demand for financial services and flat or declining employment levels by late FY 1985.

The Mining Division

Nearly all employment in Weld County mining occurs in oil and gas extraction Between the second quartersof 1982 and 1983, employment in the oil and gas sector declined by 7.3 percent, despite increased drilling activity during that period.

With flat prices for oil and gas expected through FY 1986, employment in the division will probably remain flat or grow only slightly during our outlook period.

APPENDICES

A NOTE ON THE DATA

The analyses of each Service Delivery Area is based on ES-202 data, which is supplied to the State of Colorado by all employers who are subject to the Colorado Employment Security Act. One of the items available in this data base is the number of persons working for each employer. These numbers are arranged by the Standard Industry Classification code and then aggregated.

With the exception of the table being presented on page 57, all employment analyses allocate Government employment to those private sector industries where comparable activity is being conducted. For example, public sector education is allocated to the major division of Services, and further to the 2-digit SIC Educational Services. Public Administration employment, since it has no private sector counterpart, was not allocated and is not a part of any employment analyses except on page 57, where it is included in the Government division.

Because most Agricultural, Livestock and Crop Production employment is not covered under the Colorado Employment Security Act, the ES-202 series cannot reflect this employment. This point should be kept in mind when reviewing the Agriculture, Forestry, and Fishery division comment under the Service Delivery analysis. Total Agricultural employment is reflected in the Agricultural estimate provided in the table on page 57.

The National Outlook, Colorado Outlook and Service Delivery Area Outlooks were analyzed by different staff economists. Minor differences of opinion, therefore, may be reflected in each of these presentations.

METHODOLOGIES USED TO ESTIMATE YOUTH POPULATION AND LABOR FORCE BY COUNTY - FISCAL YEAR 1984 ANNUAL AVERAGE

Population

The 1980 census gives us the proporation of the total county population that 16-21 year old persons represented at that time. Population projections of the Census Bureau indicate that between 1980 and 1990, the 15-19 age group's share of the total Colorado population will decline by 2.8 percentage points. The 20-24 age group's share of the state population is also projected to decline by 2.8 percentage points. Therefore, it was assumed that the age 16-21 share of the state population will decline by 2.8 percentage points between 1980 and 1990, or .28 percentage points per year. At this rate, the fiscal 1984 youth proportion will be 86.5 percent of the same proportion in 1980. Thus, each 1980 county youth proportion was multiplied by a factor of .865 to arrive at an estimate of the fiscal 1984 youth proportion.

The ratio arrived at by using the above procedure is then multiplied by our estimate of the total county population for fiscal 1984. This yields our 16-21 population estimate for fiscal 1984.

Disadvantaged Population

In this analysis, we define disadvantaged as the number of age 16-21 individuals who exist below the federally-defined poverty level. The ratio of total persons below the poverty line to total persons in the county is called the "overall poverty rate". The overall poverty rate in 1980 can be calculated using census data for each county. We observe from national data that the age 15-21 poverty rate (15-21 age individuals below the poverty line as a percentage of all 15-21 age individuals) increased by 15 percent from 1980 to 1982. To arrive at an estimate of the youth poverty rate for each county, we multiplied the overall poverty rate in 1980 by 1.15. We then applied this youth poverty rate to our estimate of total youth population to arrive at an estimate of disadvantaged youth.

Labor Force

Nationally, the age 16-21 labor force is 170 percent of the age 16-19 labor force. Since only age 16-19 labor force estimates were available for each county in the 1980 census, these estimates were increased by a factor of 1.7 to get a 1980 base year estimate of youth labor force. We then calculated a base year youth labor force participation rate by dividing the age 16-21 labor force by the age 16-21 population in 1980.

We observed from national data that from 1980 to fiscal year 1983, the annual average youth labor force participation rate decreased by 4.4 percent. Therefore, we decreased each county base year participation rate by 4.4 percent, and used the result as a fiscal 1984 estimate of the youth participation rate. This rate was then applied to our youth population estimate to arrive at youth labor force.

1980 census estimates of 16-19 employed for counties was multiplied by a factor of 1.71 (again based on national data) to arrive at a base year estimate of 16-21 employed. We then calculated a youth employed to labor force ratio for

1980. We observed from national data that the 16-21 employed to labor force ratio decreased by 5.7 percent between 1980 and 1983. Thus, each 1980 employed to labor force ratio was decreased by 5.7 percent to arrive at a fiscal 1984 estimate of employed to labor force. This ratio was then applied to our fiscal 1984 estimate of labor force to arrive at an estimate of employed youth.

The unemployed estimate was arrived at by simply subtracting employed from labor force.

Unemployed Disadvantaged Youth

Nationally in March of 1982, the disadvantaged 16-21 unemployed was 20.1 percent of the total 16-21 unemployed. Second, disadvantaged 15-21 individuals comprised 16.0 percent of the total 15-21 population. Dividing the former figure by the latter, we arrive at a factor of 1.26. This factor was used to inflate our county ratios of disadvantaged youth population to total youth population. The resulting adjusted ratio is then applied to the total youth unemployment figure to arrive at an unemployed disadvantaged estimate.

ELIGIBLE LABOR SURPLUS AREAS FOR BIDDING ON FEDERAL CONTRACTS

BACKGROUND

Employers located in eligible labor surplus areas, as determined by the Department of Labor, and who meet other criteria, are entitled to preference in bidding on Federal procurement contracts.

The purpose of the labor surplus area procurement preference is to help guide a portion of the government's procurement dollars into those areas where people are in most severe economic need, e.g., areas with the highest unemployment.

The concept of targeting Federal procurement into areas of high unemployment dates back to the early 1950's. There was concern among government officials at the time that high unemployment rates and low utilization of plant and equipment in some areas would lead to erosion of the mobilization base and adversely affect production during the Korean Conflict. There was also concern that the cost of constructing new plants and relocating workers would cause an unnecessary drain on resources.

The Office of Defense Mobilization studied this problem and in February 1952 issued Defense Manpower Policy Number Four (DMP-4), implementing the idea of targeting Federal procurements to labor surplus areas. The program eventually became the responsibility of the Federal Preparedness Agency within the General Services Administration.

The labor surplus area program was largely unsuccessful in producing contract set-asides to employers in such areas because the program lacked a statutory base. This was changed in August 1977 with the enactment of Public Law 95-89 which amended the Small Business Act. Public Law 95-89 authorizes Federal agencies to "set-aside" contracts for competition among firms which agree to perform a substantial portion of the production of the contract in labor surplus areas. Contracts may be set-aside when an agency determines that offers will likely be obtained from a large enough number of eligible firms to permit the awards to be made at reasonable prices.

During the Urban and Regional Policy Group's review of Federal programs in 1977-78, the labor surplus area program was identified as one which had potential for providing relief for distressed areas. In March 1978, the General Services Administration was directed to work with each Federal agency to set targets for labor surplus area contracts, monitor agency performance, and report to the President every six months on the progress of each agency. These principles were contained in Executive Order 12073 which was signed on August 16, 1978.

In addition, Executive Order 12073 assigned to the Department of Labor the responsibility for classifying labor surplus areas. This was a continuation of the Labor Department's responsibilities since the inception of the program under DMP-4 in the early 1950's. The Department also has responsibility for classifying such areas under Executive Order 10582 which implements the Buy American Act.

CLASSIFICATION CRITERIA

Under the Department of Labor's classification procedures, an area is classified as a labor surplus area if the unemployment rate is at least 1.20 times the national unemployment rate during the previous two calendar years.

The procedures also provide for the classification on the basis of exceptional circumstances. Under these procedures, if an area does not meet the criteria necessary for classification as a labor surplus area, the criteria can be waived and the area classified when there has been a sudden rise in the unemployment in the area (other than seasonal or short term) that is not reflected in the area's data for the reference period. Such situations can occur as a result of natural disasters, plant closings of major employers, etc. which have a substantial impact on the area's employment and unemployment. In situations where such exceptional circumstances occur, the area can be classified as a labor surplus area upon petition from the appropriate State employment security agency.

Labor surplus areas are classified on the basis of civil jurisdictions, i.e., counties or county equivalents, as well as all cities with a population of at least 50,000. In four states (Michigan, New Jersey, New York, and Pennsylvania), townships of 50,000 or more population are also eligible for classification as labor surplus areas. In New England, the labor surplus area classifications for Maine, New Hampshire, and Vermont are based on county data while in Connecticut, Massachusetts and Rhode Island, where counties have very limited or no government function, the classifications use towns as county equivalents. By classifying labor surplus areas in this way, i.e., in terms of civil jurisdictions rather than labor market areas, funds can be directed to specific localities with high unemployment rather than to all jurisdictions in a given metropolitan area, not all of which may suffer from the same degree of unemployment.

The eligibility status of labor surplus areas is determined annually under the classification procedures. The annual listings are effective each October 1 and remain in effect for the following 12 months.

The reference period used in making the classifications is an average of the previous two calendar years. By using an average of 24 months of data, contracts can be targeted in areas experiencing high structural unemployment.

The reference period used in preparing the current list of labor surplus areas was January 1981 through December 1982. The national average unemployment rate during this period (including data from Puerto Rico) was 8.8 percent. Because the national unemployment rate was above 8.3 percent, the 1.20 ratio was not used and the "ceiling" concept was used instead in preparing the annual listing. As a result, areas were included on the annual labor surplus area listing if their average unemployment rate during the reference period was 10.0 percent or above.

The new annual listing of labor surplus areas issued by the Department of Labor is effective October 1, 1983. The listing will remain in effect through September 30, 1984.

COMMONLY USED TERMS, ACRONYMS, AND ABBREVIATIONS

AFDC - Aid to Families with Dependent Children

All other nonag - nonagricultural self-employed, unpaid, family, and domestic workers.

Applicants available - all applicants available at end of period plus all new, new partial, and renewal applicants.

BLS - Bureau of Labor Statistics

CDET - Colorado Division of Employment and Training

CETA - Comprehensive Employment and Training Act

Civilian labor force - all civilian uninstitutionalized individuals, 16 years of age or older, employed or unemployed, by place of residence.

Civilian labor force participation rate - the ratio of the civilian labor force to the civilian uninstitutionalized population. Participation rates are usually published by sex-age groups and often are cross-classified by other demographic characteristics.

CPS - Current Population Survey

Continued weeks claimed - the sum of weeks claimed for partial or total unemployment under the unemployment compensation program.

Counseling interview - a face-to-face interview in which an employment counselor or employment counselor trainee (1) helps an applicant resolve problems of occupational choice or change or job adjustment and (2) obtains and records on the application and/or other appropriate applicant records one or more of the following: (a) a summary statement describing the counseling problem; (b) additional information contributing to a better definition of the problem or its solution; (c) a statement of an occupational plan or recommendation for the solution of the problem; and (d) when pertinent, a statement elicited in the course of follow-up concerning progress in carrying out the counseling plan and any further services needed.

Deregistration - denotes that a WIN registrant is being separated from the program for one of the following reasons: (1) employed after registration, off AFDC; (2) employed volunteer, not off AFDC; (3) applicant not eligible for AFDC; (4) applicant exempt from registration for work; (5) applicant sanctioned (removed for refusal to participate in program without good cause); (6) applicant off AFDC for non-WIN-related reasons such as death, moving, etc.

DOL/ETA - Department of Labor, Employment and Training Administration

DOT - Dictionary of Occupational Titles

Employed - those individuals, 16 years old or older, who did any work at all during the monthly survey week; includes full-time, part-time, and temporary workers. Individuals are also counted as employed if they have jobs but are temporarily absent from work.

Executive order - a formal document issued by the President of the United States (or in Colorado, the Governor) which has the force of law. Executive orders are compiled in Title 3 of the Code of Federal Regulations.

Filled opening - a job opening for which an applicant referred by a local office has been hired by an employer and has entered the job.

HEW - the Department of Health, Education, and Welfare (now split into the Department of Health and Human Services and the Department of Education).

Individuals placed - initial referrals, hirings, and entrance into jobs by applicants during a fiscal year. These activities together comprise "placement transactions".

Initial claim - an application for a determination of eligibility for benefits which certifies the beginning date (or the continuance into a new benefit year) of a period of unemployment.

JTPA - Job Training Partnership Act

Job Development contact - the process of soliciting a public or private employer's order for a special applicant for whom the local office has no suitable opening currently on file.

LMA - Labor market area

New applicant - a person filing an application card (Form 511A) for whom a local Job Service Center has no previously-prepared application card or whose previous application has become obsolete.

Nonagricultural (nonag) wage and salary - refers to nonagricultural-established employment.

Not in labor force - includes all civilians 16 years old and over who are not classified as employed or unemployed.

Obtained employment - employment not meeting the definition of "placement" (g.v.). This term is applied to WIN registrants only.

Placement - the hiring by a public or private employer of an individual referred by the employment office for a job or an interview, provided that the employment office completed all of the following steps: (1) prepared a job order form prior to referral, except in the case of a job development effort on behalf of a specific applicant; (2) made prior arrangements with the employer for the referral of an individual or individuals; (3) referred an individual who had not been specifically designated by the employer, except for referrals on agricultural job orders for a specific crew leader or worker; (4) verified from a reliable source, preferably the employer, that the individual had entered on a job; and (5) appropriately recorded the placement.

Referral - the act of determining that an applicant is qualified for a job opening and arranging an interview for the applicant with the employer.

Renewal - the transfer of an applicant from the inactive file to active status; that is, he/she is again considered to be available for referral to job openings or employability-development services.

SIC - standard industrial classification

SMSA - standard metropolitan statistical area

Testing - administering a test (standardized means of measuring an individual's possession of, interest in, or ability to acquire job skills or knowledge) to an applicant.

Unemployed - those individuals 16 years of age or older without a job who are available for work and actively seeking work.

WIN - Work Incentive Program
